Attainment of program outcomes, program specific outcomes and course outcomes

UTKAL UNIVERSITY Bhubaneswar 751004, Odisha

1. PREAMBLE

Being the mother university in Odisha, we at Utkal University thrives to become a premier university in India with a vision of offering several need-based, value-conscious and job-oriented quality educations to the students that cater to the need of the society at large. To this effect, the Choice Based Credit System (CBCS) is followed with the flexibility to innovate and design the course contents of each programme in line with the mission of the university. In order to have higher education with quality assurance, outcome-based education (OBE) are developed for each programme with a focus towards teaching, learning and assessment where the course contents are developed in terms of learning outcomes or course outcomes (CO). This idea makes a paradigm shift from the traditional teaching-learning process to OBE with a focus on continuous quality improvement (CQI) of the students at the end of the course or program. Accordingly, programme outcomes (PO) are defined and assessed by the faculty by mapping them into CO and taking appropriate steps for continuous improvement of the students and to improve their personal development and make them employable.

1.1. Programme Educational Objectives (PEOs):

PEOs are broad statements that describe the career and professional achievements that the programme is preparing the graduates to achieve within the first few years after graduation. PEOs should be consistent with the mission of the Institution. PEO's can be measured by a PO-PEO matrix. The PEOs should evolve through constant feedback from alumnae, students, industry, management etc, It is mandatory that each PEO should be mapped to at least one of the POs.

1.2. Programme Outcomes (PO):

Programme Outcomes are narrower statements that describe what students are expected to know and be able to do upon graduation. These relate to the skills, knowledge and behaviour that students acquire in their study through the programmes.

1.3. Course Outcomes (CO):

Course Outcomes are narrower statements that describe what students are expected to know and be able to do at the end of each course. These relate to the

skills, knowledge, and behaviour that students acquire in their study through the course. Each course comprises five COs and the keywords used to define COs are based on Bloom's Taxonomy [k1] to [k6].

1.4. BLOOM'S TAXONOMY:

Bloom's Taxonomy was created in 1956 by an educational psychologist Dr. Benjamin Bloom in order to promote higher forms of thinking in education, such as analyzing and evaluating concepts, processes, procedures, and principles, rather than just remembering facts. It is most often used when designing educational, training, and learning processes.

1.5. CO - PO MAPPING OF COURSES:

After CO statements are developed by the course in charge, COs will be mapped with any possible POs based on the relationship that exists between them. A CO must be mapped to at least one PO. The PO's which are not related to any of the COs in a particular course may be left blank. All the courses together must cover all the POs. The mapping between COs and PO can be defined by three levels using the Letter Grades H, A, L which denote respectively High (H), Average (A), and Low (L) correlation and accordingly points are earmarked as 3,2,1 respectively.

2. MEASUREMENT OF ATTAINMENT OF DESIRED GOALS:

Course Outcome (CO) is measured through the performance of students by the various assessment tools adopted for that particular course. Each evaluation tool is mapped to a particular verb in Bloom's Taxonomy and further, each verb is mapped to a particular CO. Once the Course Outcome is measured, the PO can be measured using a CO-PO matrix. Measurement of PO attainment shall be done by direct and indirect methods. Direct assessments (rubric based) - Conventional assessment tools such as Term Tests (20%), Quizzes, Seminars and Assignment together (10%) and End Semester Examinations (70%) with specified weightages are used for CO-PO mapping and to find out the attainment level. Indirect assessments such as feedback from students, Alumnae, employers and Parents are used to improve the syllabus for better quality education to meet societal and industrial needs. The target level of attainment shall be fixed by the Course teacher and the teacher's council of respective departments.

2.1. PROCESS INVOLVED IN CO DEFINING AND CO-PO MAPPING:

Assessment of COs, POs and PSOs is a core academic activity and highly essential to assess the learning ability of the student. Programme outcome assessment is a continuous process to support teaching, learning and evaluation. It is the main mechanism to monitor the effectiveness of the learning environment based on evidences that determine whether students have met the course outcomes and objectives.

- Curriculum development includes description of Course Outcomes and Mapping of COs with POs.
- Program Curriculum along with COs & POs included in Syllabus will be approved in BoS & AC.
- There is a well-defined process for attainment of COs & POs in the University.
- During the execution if any gaps were identified then necessary action will be enforced by the departmental level committee with the support of BoS & AC.
- These Departmental- Level Committees will set the target both COs & POs
 prior to the commencement of the semester keeping in the view of earlier
 batch attainments and Current batch pass percentage.
- Course coordinators have been given with free hand in the designing of COs and mapping of COS with POs, and the assessment tools with rubrics will be defined by the course coordinator with the due approval of departmental committee.
- The direct assessment of POs is defined as cumulative assessment of Cos.
- Indirect Assessment involves the qualitative method of obtaining the reflections of the stakeholders like Students, Alumni, Faculty, Employers, Parents and Experts on the achievement of the program outcomes, through feedback mechanism.
- CO-PO mapping will be done by respective subject experts during the preparation of curriculum. The CO-PO mapping will be verified and or modified by respective senior faculty along with other faculties handling the same subject before the commencement of class work. The CO-PO mapping will be approved by DAC. Model of Cos-POs is be as follows in Fig No 1.1.

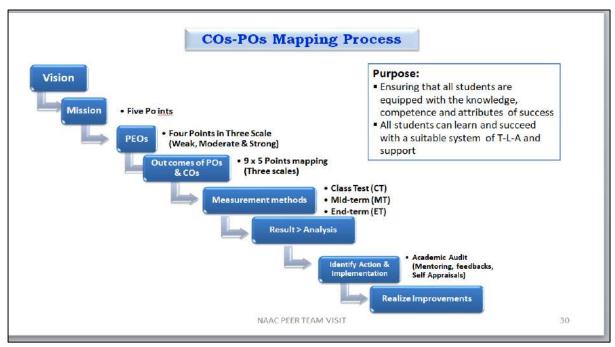

Fig No 1.1.: Cos-POs mapping Process

3. ASSESSMENT PROCESS IN PRACTICE:

Assessment is one or more processes carried out by the institution that identify, collect and prepare data to evaluate the achievement of course outcomes and programme outcomes. Its purpose is of (a) eensuring that all students are equipped with the knowledge, competence and attributes of success; (b) All students can learn and succeed with a suitable system of T-L-A and support.

3.1. Assessment Process for CO Attainment:

The role of CO-PO mapping will be assigned to the faculty. Since the department is having more than one section in a year, after the course (subject) allotment from the department, the senior faculty (subject expert) will be nominated as Programme coordinator of the corresponding course. The course coordinator (senior faculty) of the course along with other faculties (who handle the same subject) has to verify/modify appropriate COs for their corresponding Programme. It should be narrower and measurable statements. By using the Bloom's Taxonomy levels, CO's will be designed. CO statements should describe what the students are expected to know and able to do at the end of each course, which are related to the skills, knowledge and behaviour that students will acquire through the course. After writing the CO statements, CO will be mapped with PO. The role of the Programme

coordinator is to review the CO statements and the CO-PO mapping which has been done in association by course in-charges. The program coordinator has to consolidate the CO attainment level and PO attainment level of individual course at the end of the semester. For the evaluation and assessment of CO's and PO's, rubrics are used.

3.2. Course Articulation Matrix

Course correlation matrix shows the learning relationship (Level of Learning Achieved) between Course Outcomes and Program Outcomes of a course. This matrix strongly indicates whether the students are able to achieve the course objectives/outcomes. The matrix can be used for any course and is a good way to evaluate a course syllabus/content/structure. All the courses together must cover all the POs (and PEOs). For a course we map the COs to POs and PEOs through the CO-PO-PEO matrix. The various correlation levels in the matrix are as shown below.

- "1" Slight (Low) Correlation,
- "2" Moderate (Medium) Correlation,
- "3" Substantial (High) Correlation

As an instance, the description of Course MLIS-402 are as follows:

MLIS-4	402: RESEARCH METHODOLOGY & STATISTICAL TECHNIQUES
CO-1	Have a fundamental understanding of the basic concepts of Library Administration.
CO-2	Apply basic principles of AI in solutions that require problem-solving, inference, perception, knowledge presentation, and learning.
CO-3	Have a fundamental understanding of various applications of Al techniques in intelligent agents, expert systems, artificial neural networks, and other machine learning models.
CO-4	Have knowledge of the current scope and limitations, and societal implications of AI.
CO-5	Have a basic foundation in machine learning.

(i) CO Assessment Rubrics:

Course Outcome is evaluated based on the performance of students in the Continuous Internal Assessments, Assignment & Quiz and in End Semester Examination of a course

(ii) CO Assessment Tools:

- For Theory: One mid-term examination of one hour duration is conducted with 20% credit, at-least one assignment and quiz are given for each course with 10% credit and finally students appear the end-term examinations after completion of the course of three hour duration with a credit of 70%.
- For the theory courses, evaluations of course outcomes (CO) are then carried out. The questions in the Mid-Term Test, Quiz and Assignment are framed in such a way that they cover all the COs of respective course. The final attainment for each CO under direct assessment is calculated by taking average of the CO attainments from Mid-Term Test, Assignment and Quiz. End-term examination covers the entire syllabus of the course and generally satisfies all course outcomes for a particular course. The COs are then evaluated based on the set attainment levels. For all these assessment tools, all POs are to be mapped with Cos to obtain the final attainment levels.

The step by step process for assessing course outcomes is:

- **Step 1:** The Course coordinator analyses each course outcome into elements (different abilities specified in the outcome) and a set of attributes defined for each element (actions that explicitly demonstrate mastery of the abilities specified).
- **Step 2:** Identify/select courses syllabus that address the outcome (each unit in syllabus contributes to at least one of the outcomes).
- **Step 3:** For each course outcome, define performance indicators (Assessment criteria) and their targets.
- **Step 4**: The Programme coordinator collects the qualitative and quantitative data and analyse the collected data and assessed the level of data meets the performance targets.

Step 5: The department advisory board (Consist of HoD, Senior faculty and Coordinator) recommends content delivery methods/ course outcomes/curriculum improvements as needed.

(iii) CO Attainment:

 Direct CO Attainment: Course outcomes of all courses are assessed and the CO wise marks obtained by all the students are recorded for all the assessment tools mentioned above. The respective CO attainment level is evaluated based on set attainment rubrics.

Level-1: percentage of students who secures less than 60% of the total marks

Level-2: percentage of students who secures between 60% to 70% of the marks

Level-3: percentage of students who secures more than 70% of the marks

Target setting for Assessment method:

The marks by the students at the current semester as mentioned above can be kept as a target.

The formula used for calculating the Attainment for each CO:

Attainment = Percentage of students who have scored more than the target marks

(iv) Direct Attainment of POs:

The POs are purely technical in nature, while the other POs are transferable skills. POs of University are to be calculated by a 9 Articulation Matrix across the programme, irrespective of their discipline such as:

POs	Articulation Matrix in General
PO-1	Application of basic concepts
PO-2	Problem identifying, defining, and analyzing
PO-3	Application of latest techniques, tools, and skills
	Acknowledging sustainable development by the impact of computing
PO-4	solutions.
PO-5	Ethics
PO-6	Effective teamwork
PO-7	Effective communication
	Managing projects in a multidisciplinary environment as a member
PO-8	and a leader.
PO-9	Life-long learning

• Direct Attainment of POs ate then computed for all Courses at the end of each programme through the direct PO assessment is done from the CO attainment of all courses. The direct PO attainment for a particular course is determined from the attainment values obtained for each course outcome related to that PO and the CO-PO mapping values. For the evaluation and assessment of CO's and PO's, the same set of rubrics is used. As an instance, the PO-CO matrix indication PO attainment will be done as the way follows:

	PO1	PO2	PO3	PO4	PO5	P06	P07	P08	PO9	
CO1	3	3	3	3	.3	3	3	3	2	7.
CO2	2	2	2	2	2	2	2	2	3	
CO3	3	3	2	3	2	2	2	3	3	
CO4	3	2	3	3	2	2	1	3	2	
C05	2	2	2	2	1	3	2	2	3	Average
Ovearall Mapping of the Subject	2.6	2.4	2.4	2.6	2	2.4	2	2.6	2.6	2.40
Attainment (Overall attainment of the subje	2,85	2.83	2.83	2.85	2.90	2.75	2.70	2.62	2.62	2.77

(v) Assessment Process For Programme Educational Objectives:

The curriculum is designed so that all courses contribute to the achievement of PEOs. The marks secured by the students in these courses indicate the level of achievement of the PEOs. In addition, Alumnae survey, Placements of students and progression to higher studies also contribute to the attainment of PEOs. The same rubrics are used for calculating the attainment level.

(vi) CO-PO and CO-PEO Mapping Of Courses

The assessment takes place at following levels: a) The Course-level Assessment, b) The Programme level assessment. The CO attainment levels are measured based on the results of the cumulative internal examinations and semester end examination conducted by the university. This is a form of direct measurement of attainment.

* The Tools for assessment marks for internal and external examinations will follow the details of guidelines and manual of Utkal University and its revision and or updating from time to time.

4. DIRECT ATTAINMENT METHOD OF PO/PEO

The attainment of PO/PEOs process requires the attainment of COs and CO-PO-PEO mapping table (Course articulation matrix) for the course. The following table 3 shows the tools and process for direct PO attainment.

PO Attainment	Tools	Process
Direct CC Attainments	Internal Assessment Test Assignments Tutorials Online Quiz University Examination	 Assignments / Tutorials / online quizzes are given periodically for the entire course to attain the specific POs. Three Internal Assessment Tests are conducted per semester to evaluate the student performance. University Examination is conducted once in a semester as per Anna University Schedule
	Performance Viva Voce Record Presentation Group Discussion	 Student Contribution in laboratory is evaluated based on the performance, Viva Voce, Presentation and Record Work. Model Practical examination is conducted for 100 marks for a duration of 3 hours. University Examination is conducted once in a semester as per Anna University Schedule
	Project Reviews	 Students are divided into batches. Each batch consists of three to four students. Supervisors are allotted for each group. Zeroth reviews are conducted for the students to identify the area of project. Three reviews are conducted periodically to monitor and evaluate the progress of the project. Viva-Voce is conducted at the end of the semester.

Course level PO & PEO Attainment Calculation

CO Attainment Ratio of Course(x) =
$$\frac{CO \text{ Attainment of Course}(x)}{3(\text{Maximum attainment Value})}$$

$$Where, x = [1 \text{ to N}], N = \text{Number of Courses}$$

$$POm \text{ Attainment of course}(x)$$

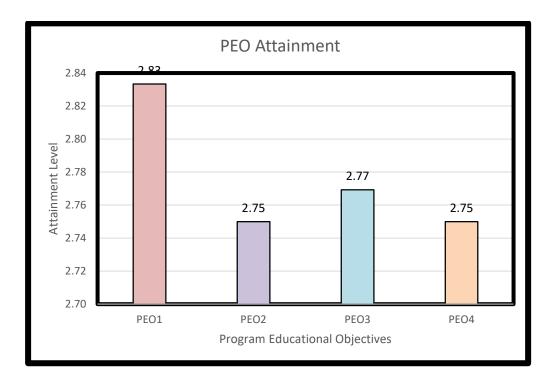

$$= CO \text{ Attainment Ratio of Course}(x) \text{ X POm Mapping Value of Course}(x)$$

The PO & PEO attainment for the course is calculated using the following formula.

The CO attainment of a course and its CO-PO-PEO mapping tables are given below:

PEO-CO MATRIX INDICATING PEO ATTAINMENT								
	PEO1 PEO2 PEO3 PEO4							
CO1	3	3	2	3				
CO2	3	1	3	3				
CO3	3	3	3	2				
CO4	1	2	2	1				
CO5	2	3	3	3	Average			
Overall Mapping of the PEO	2.40	2.40	2.60	2.40	2.45			
PEO Attainment	2.83	2.75	2.77	2.75	2.78			
FORMULA USED PEO1=(2.00*3+1.85*3+2.08*3+2.03*1+1.97*2)/(3+3+3+1+2)								

Indirect Assessment involves the qualitative method of obtaining the reflections of the stakeholders on the achievement of the program outcomes, through feedback mechanism. These methods provide clues about what could be assessed directly easy to administer particularly useful for ascertaining values and beliefs. The PEO attainment will be as follows:

5. IDENTIFICATION OF ATTAINMENT GAPS AND PRACTICES TO IMPROVE:

To improve the PO and PEOs, We used the following activities –

- Academic activities
- Professional activities Academic activities enforced to improve the attainment of PO and PEOs from In addition to the teaching and learning practices, the following are adopted.
- Increase in the attendance cut off
- Introduction of Periodic Assignments
- Introduction of Continuous Laboratory Assessment in Laboratory Courses.
- Professional activities enforced to improve the attainment of POs and PEOs
- Effective Counselling and mentoring

REVISED SYLLABUS M.A.in Economics

UNDER CBCS SYSTEM (FROM SESSION- 2021-22 & ONWARDS)

AFFILIATED TO

UTKAL UNIVERSITYVANI VIHAR, BHUBANESWAR

P.G. DEPARTMENT OF ECONOMICS GOVINDPUR (DEGREE) COLLEGE DEVI VIHAR, GOVINDPUR, CUTTACK-754003

Email: govindpurcollege@gmail.com Website: www.govindpurcollege.in

The College offers the Post Graduate level course of M.A in Economics and the syllabus are revised at par with the P.G Department of A&A Economics of Utkal University since the session 2021-22 as per the BOS decision.

Master of Arts in Economics

Eligibility: Bachelor's degree in 10+2+3 or other equivalent modes

Intake Capacity: 88

Selection criteria: Career score and performance in common entrance test.

Programme Description and Objectives:

The Masters programme in A & A Economics was initiated in 1963 as an effort to provide Economics education to students of Odisha aspiring for a career in economics and public policy. Currently, the programme operates in a Choice Based Credit system (CBCS) mode of 100 credits spread out in four semesters. The course composition includes analytical courses termed as Hard Core Economics courses such as Microeconomics, Macroeconomics, Quantitative Methods, Public Economics, Indian Economy and Basic Econometrics. These courses are designed to provide a core understanding of the subject. There are also applied courses termed as Core Electives and Allied Electives which are designed to enrich understanding on application of economics in various fields influencing economic and social life of human beings. A detailed description of these courses is given in the detailed syllabus. In order to make the course more interdisciplinary and to respect the spirit of choice based system of education, there are also courses called free electives offered to any student of the university irrespective of their discipline. These courses include International Finance, Computer Application in Economics, Environmental Impact Assessment, and Entrepreneurship and Economic Development. The courses are revised in regular intervals to incorporate new knowledge in economic sciences and their application. In order to promote research aptitude and orientation, which can help our students in their higher studies in economics, the programme also includes a five credit course that requires students to undertake a guided research work and write a dissertation reporting their findings.

Expected Outcomes of the MA Programme

The students who successfully complete the programme are expected to have

- (1) Exposure to social realities through study tours, data collection through fieldwork and regular interaction with experts in student seminars.
- (2) Exposure to computational packages like Stata and SPSS which are widely used for data analysis in industry.
- (3) Better employability through skill building in quantitative research, computational packages, add-on courses and compulsory Internship programme introduced in 2021
- (4) Better writing skills through their engagement in dissertation writing, term papers and concurrent evaluation activities.

M.A CBCS ENGLISH PROGRAMME

In Accordance with the UGC- Learning Outcomes based Curriculum Framework (LOCF)

2021-22

DEPARTMENT OF ENGLISH
FACULTY OF ARTS
UTKAL UNIVERSITY
VANI VIHAR, BHUBANESWAR

Master of Arts (M.A) in English

About the Programme

Eligibility: Bachelor's degree in 10+2+3 or other equivalent modes

Intake capacity: 40

Selection criteria: Career score and performance in the P.G common entrance test

The M. A programmein English is a two-year advance course which deals with the study of Literature and Language in English across the world. The programme is aimed at developing a broad competence in literary-historical periods before moving to a more specialized knowledge of a single area or topic. It offers a comprehensive exposure not only to literary periods but to important literary movements, literary theory and the history of criticism, translation and other emerging areas. In its updated version, research has been given the utmost importance to help students learn to consider sources of information and evaluate the nuances of meaning and the impact of language and literary texts.

The syllabus has been designed and updated keeping in mind the Choice Based Credit System and Learning Outcomes Curriculum Framework recommended by the UGC.

Programme Objectives:

- 1. To provide comprehensive understanding and knowledge of English Literary Studies and facilitate careers in teaching, translation, publishing, print/electronic media, and pursuit of higher studies
- 2. To encourage a liberal, ethical, humanitarian attitude and affective states
- 3. To inculcate in the students a spirit of respect for the imagination and the intellect as embodied in the literary and cultural traditions
- 4. To foster interest in other arts like theatre and film and analyze the multiple ways in which they can enrich literary studies itself
- 5. To promote the necessary skills of critical reading, analysis and writing
- 6. To help students learn the basic skills of research and writing a dissertation

Programme Outcomes:

Upon successful completion of the M.A programme in English, students will be able to

- 1. Read, understand and appreciate great works of literature in English produced not only in England but elsewhere in the world
- 2. Demonstrate acquaintance with major critical trends including the recent ones in order to sharpen their critical tools and develop a broad and inclusive critical perspective
- 3. Study literature largely in its aesthetic and humanist emphasis and at the same time relate it to language, structure, history, reader, subjectivity and gender
- 4. Know the principles and methods of English Language Teaching (ELT) and equip themselves with a general background knowledge of theoretical linguistics
- 5. Understand the nature and scope of research in literature and its allied subjects
- 6. Take an active interest in their own literatures through translation and develop a cross-cultural understanding of literature in general

Mode of Evaluation

The M.A programme in English comprises 4 semesters. Semesters 1 & 2 have 5 courses each, whereas, Semesters 3 & 4 have 4 courses each along with a research project presentation and a dissertation in the 3rd and 4th Semester respectively. In all,a student has to study 18 courses/papersspread over Core,

Name of the Programme: B.A. English	Name of	of the	Programme:	B.A.	English
-------------------------------------	---------	--------	------------	------	----------------

				Togramme. D.A. English
Name of the Class	Course Code	Course Title		Course Outcome
				SEMESTER - I
SEM 1 B.A.	CORE - 1	British Poetry and Drama: 14th to 17th Centuries	CO1	The paper seeks to introduce the students to British poetry and drama from the 14th to the 17th centuries. The period is remarkable in many ways: 14th century poetry evokes an unmistakable sense of "modern" and the spirit of Renaissance is marked in the Elizabethan Drama. The Reformation brings about sweeping changes in religion and politics. A period of expansion of horizons: intellectual and geographical. It offers the students an exploration of certain seminal texts that set the course of British poetry and plays.
SEM 1 B.A.	CORE - 2	British Poetry and Drama: 17th and 18th Century	CO1	The objective of this paper is to acquaint students with the Jacobean and the 18th century British poetry and drama, the first a period of the acid satire and the comedy of humors; and the second a period of supreme satiric poetry and the comedy of manners. This paper will teach, particularly, 17th C: Period of the English Revolution (1640–60); the Jacobean period; metaphysical poetry; cavalier poetry; comedy of humors; masques and beast fables. 18th C: Puritanism; Restoration; Neoclassicism; Heroic poetry; Restoration comedy; Comedy of manners.
SEM 1 B.A.	GE-1	Academic Writing and Composition	CO1	This is a generic academic preparatory course designed to develop the students' writing skills from basic to academic and research purposes. The aim of this course is to prepare students to succeed in complex academic tasks in writing along with an improvement in vocabulary and syntax.
SEM 1 B.A.	SEC 1	Skill Enhancement Compulsory Course for Arts	CO1	The purpose of this course is twofold: to train students in communication skills and to help develop in them a facility for communicative English. Since language it is which binds society together and serves as a crucial medium of interaction as well as interchange of ideas and thoughts, it is important that students develop a capacity for clear and effective communication, spoken and written, at a relatively young age. The need has become even more urgent in an era of globalization and the increasing social and cultural diversity that comes with it.
				SEMESTER - II
SEM 2 B.A.	CORE -3	British Literature: 18th Century	CO1	The objective of the paper is to acquaint the students with two remarkable forms of literature: Essay and novel. The period is also known for its shift of emphasis from reason to emotion. The students will learn about Restoration, Glorious Revolution, Neo-classicism, and Enlightenment.
SEM 2 B.A.	CORE -4	Indian Writing in English	CO1	Though a late developer, Indian writing in English has been the fastest growing branch of Indian literature. It has delivered a rich and vibrant body of writing spanning all genres. As a 'twice born' form of writing, it partakes of both the native and alien perspectives and has an inherent inclination to be postcolonial. This paper attempts to introduce the students to the field of Indian writing in English through some representative works.
SEM 2 B.A.	GE - 2	Modern Indian Literature	CO1	The paper aims at introducing students to the richness and diversity of modern Indian literature written in many languages and translated into English.

SEM 2 B.A.	SEC 2	Translation and Principles of Translation	CO1	This paper seeks to make students aware of a fundamental process of human communication which involves movement between languages. Known by the familiar term of translation, this process of transfer of meaning and values across language borders is as inevitable as it is problematic and challenging. The paper would acquaint students with the 'what', 'why' and 'how' of translation, approaches and problems of translation, and it would also sensitize them to the various ways of reading a translation.
				SEMESTER - III
SEM 3 B.A.	CORE – 5	British Romantic Literature	CO1	The paper aims at acquainting the students with the Romantic period and some of its representative writers. At the same time one of the chief objectives of the paper is to give the students with a broad idea of the social as well as historical contexts that shaped this unique upheaval.
SEM 3 B.A.	CORE – 6	19th Century British Literature	CO1	The paper seeks to expose students to the literature produced in Britain in the 19th century. The focus is mainly on prose (fictional and non-fictional) and criticism. The reading will attempt to formulate the ways in which the generic boundaries of the novel are extended by the new subject matter and setting. The 19th century embraces three distinct periods of the Regency, Victorian and late Victorian.
SEM 3 B.A.	CORE – 7	American Literature	CO1	This course seeks to introduce students to the social, historical, cultural and critical contexts of American poetry as well as novel both in the 19th and 20th century. This background reading would enable students to better understand the close textual analysis of individual poems that would follow.
SEM 3 B.A.	GE - 3	Language, Literature and Culture	CO1	This is a broad-based course that aims to encourage students to be knowledgeable and inquiring into the nature of language, nature of literature and the role of culture in both. The course introduces students to how language in special for humans, and how literature and culture make human beings caring. There is a strong emphasis here on encouraging students to develop intercultural understanding, open-mindedness, and the attitudes necessary for them to respect and evaluate a range of points of view.
				SEMESTER - IV
SEM 4 B.A.	CORE – 8	British Literature: Early 20th Century	CO1	This paper aims to familiarize the students with the new literature of Britain in the early decades of the 20th century. The course will mainly focus on the modernist canon, founded on Ezra Pound's idea of 'make it new', but will cover war poetry, social poetry of the 1930s and literary criticism.
SEM 4 B.A.	CORE – 9	European Classical Literature	CO1	The objective of this paper is to introduce the students to European Classical literature, commonly considered to have begun in the 8th century BC in ancient Greece and continued until the decline of the Roman Empire in the 5th century AD. The paper seeks to acquaint the students with the origins of the European canon.
SEM 4 B.A.	CORE – 10	Women's writing	CO1	The course aims to acquaint the students with the complex and multifaceted literature by women of the world, reflecting the diversity of women's experiences and their varied cultural moorings. It embraces different forms of literature: poetry, fiction, short fiction, and critical writings. In certain respects, it interlocks concerns of women's literary history, women's studies and feminist criticism.
SEM 4 B.A.	GE - 4	Language and Linguistics	CO1	The objective of this paper is to make the students learn of the basics of linguistics as well as language.
	<u> </u>			SEMESTER - V
SEM 5 B.A.		Modern European Drama Indian Classical	CO1	The aim of this paper is to introduce the students to the best of experimental and innovative dramatic literature of modern Europe. This paper aims at creating awareness among the students of the rich and diverse
SEM 5 B.A.	CORE – 12	Literature	CO1	literary culture of ancient India.

SEM 5 B.A	. DSC - 1	Literary Theory	CO1	The development of theory in the last half-century or more is a fact of critical importance in the academic study of literature. Far from being seen as a parasite on the text, theory has been seen as a discourse that provides the conceptual framework for literature. This paper aims to give the students a firm grounding in a major methodological aspect of literary studies known as theory.
SEM 5 B.A	DSC - 2	Reading World Literature	CO1	This paper proposes to introduce the students to the study of world literature through a representative selection of texts from around the world. The idea is to read beyond the classic European canon by including defining literary texts from other major regions/countries—except the United States of America—written in languages other than English, but made available to the readers in English translation.
	V2 3			SEMESTER - VI
SEM 6 B.A	. CORE – 13	Postcolonial Literature	CO1	This paper seeks to introduce the students to postcolonial literature—a body of literature that responds to the discourses of European colonialism and empire in Asia, Africa, Middle East, the Pacific and elsewhere. By focusing on representative texts situated in a variety of locations, the paper aims to provide the students with the opportunity to think through and understand the layered response—compliance, resistance, mimicry and subversion—that colonial power has provoked from the nations in their search for a literature of their own.
SEM 6 B.A	CORE – 14	Popular Literature	CO1	This paper seeks to introduce the students to genres such as romance, detective fiction, campus fiction, fantasy/mythology, which have a "mass" appeal, and can help us gain a better understanding of the popular roots of literature.
SEM 6 B.A	DSC - 3	Research Methodology	CO1	Research methodology is a discipline specific course pitched at a higher level than the generic academic preparatory courses. Research is at the core of every university course starting from the UG to the PhD level. This course is designed to develop the fundamentals of research from creating a questioning mechanism in the students' minds leading up to writing research papers and dissertations. Students learn the methodological issues imperative for conducting research and for research documentation. The course also aims to train students in the essentials of academic and research writing skills.

Aim

- The aim of this programme is to broaden the minds with modern scientific discoveries that will be useful to adopt with the various needs of human being and to continue with the par excellent research works in India.
- As the curriculum provides relevant knowledge on plants with both traditional and modern description, it will enrich the brains of students with the basic concepts of Botany and also allow them to think in relevance with modernity.
- The plant science now a days is being correlated with different other branches
 of science like forensics, marine biology, biotechnology, tissue culture,
 agriculture, horticulture, sericulture, biostatistics, economics etc.
- This curriculum provides all those basic concepts on the branches like molecular biology, genetics, plant breeding, biostatistics, pathology, economic importance of crops, histological display of various plant parts.
- Talking about basic botany, it gives a broad idea about ecology, environment and its protection, life cycles of various categories of plants around us.
- Phytogeographical studies throw light on different kinds of forests, land masses and zones of the world with wide range of habitat.
- Reproductive biology enriches the minds with new innovative ideas to produce varieties of plants as per the human demand.
- Moreover this curriculum provides an equal opportunity for the students to compete with the students of other big universities of India and abroad.

OBJECTIVE:

This curriculum can help students with achieving objects like...

- To make survey of different plants of various geographic area and classify them properly.
- To help in preservation, conservation and sustainability development.
- To carry out botanical, horticultural and chemical research for plant improvement and utilization.
- To offer facilities for the improvement of medicinal values of plants to be utilised in various pharmacy industries.
- To engage in activities, conducive to help botanical teaching and to create public understanding the value of plant research in general and the need for preserving our plant wealth.
- To establish tissue culture facility with special reference to the improvement of seeds/fruits/ flowers and quick and easy propagation.
- To work in collaboration with similar institutes in india.
- To promote and establish modern scientific research and development studies relating to plants of importance to India.

PROGRAMME/COURSE	COURSE SPECIFIC OUT COME	LEARNING OUT COME
CC-I-Microbiology and Phycology	To study about Bacteria, Virus and different classes of Algae.	A student can gain knowledge about the basics of life and lower group of plants which originated as primitive and still have existance with developed plants.
CC-II-Bio molecules and Cell biology	To read in detail about the different living and nonliving cell organelles and their structure and function. Also to read different bio molecules present in plant body.	Students can understand about the basic functional units of life when they are clear about the cell and the biomolecules like protein, carbohydrates, lipds, nucleic acids etc.
CC-III-Mycology and Phytopathology	To study about different classes of Fungi and disease causing fungal agents in nature with symptoms and irradiation.	A student can attain wisdom to the vast field of mycology and can contribute for environment protection, drug manufacturing, industry, food etc.
CC-IV-Archegoniate	To read about other plant groups other then Thallophyta, like Bryophytes, Pteridophytes and gymnosperms.	This branch provides a field to understand and work on the evolution of life on earth on a systematic manner, thus throwing light to understand life well
CC-V-Anatomy of Angiosperms	Histology is the study that provides knowledge in detail about the anatomy and the different types tissue that are present in plant body.	To know about anything always comes from its internal structure, arrangement of various systems and their function. It gives a realistic interpretation of a plant function.
CC-VI-Economic Botany	It classifies the plants as per their productive materials and their economic value for the mankind.	This is a ink between plants and their anthropogenic uses in agronomy, chemistry, economics, forestry, horticulture, medicine, microbiology, pharmacognosy etc.
CC-VII-Genetics	It gives a broad idea about the origin of genetics, modern trends about the genetic developments along with population and evolutionary genetics	It is a branch of biology concerned with the study f genes, genetic variation, and heredity in organisms. we need to look deep into our genes which provides a detail data of our origin tree, development and a need for future changes.
CC-VIII-Molecular Biology	A broad idea is depicted about DNA,RNA, their replications, central dogma on protein synthesis,operon	Molecular biology is the study of biology at a molecular level. The field overlaps with other areas of biology and chemistry, particularly genetics

PROGRAMME/COURSE	COURSE SPECIFIC OUT COME	LEARNING OUT COME
	concept and other gene regulations	and biochemistry. Molecular biology chiefly concerns itself with understanding the interactions between the various systems of a cell, including the interrelationship of DNA, RNA and protein synthesis and learning how these interactions are regulated.
CC-IX-Plant Ecology and Phytogeography	It enhances the knowledge about different factors of ecology, biotic interactions, functional aspects of ecosystems, plant communities etc.	Plant ecology is a subdiscipline of ecology which studies the distribution and abundance of plants, the effects of environmental factors upon the abundance of plants, and the interactions among and between plants and other organisms. Phytogeography is concerned with all aspects of plant distribution, from the controls on the distribution of individual species ranges
CC-X-Plant Systematic	It is a study about significance of plant systematic, nomenclature, system of classification, phylogeny and different classes.	It is a science that includes and encompasses traditional taxonomy; however, its primary goal is to reconstruct the evolutionary history of plant life. It divides plants into taxonomic groups, using morphological, anatomical, embryological, chromosomal and chemical data.
CC-XI-Reproductive Biology of Angiosperms	It is the study of embryological developments in plants, pollination, fertilization ,embryo and seed formation.	A student should know well about the reproduction style of a plant, about the flowers, the fruits and seeds. This will lead to many breeding projects and production of mutational plants to overcome over demanded human needs.
CC-XII-Plant Physiology	It is the basic knowledge about a plant describing about the physiological processes like plant-water relation, mineral nutrition, translocation, growth regulators,	Physiology is extremely important, this determines how well new cultivars can handle stresses like drought, salinity, heat, etc. Also yield improvements are also tracked in this manner. Plant physiology explains how plants function in all environments.
CC-XIII-Plant Metabolism	Another branch of botany	Plant metabolism is defined as the

PROGRAMME/COURSE	COURSE SPECIFIC OUT COME	LEARNING OUT COME
	dealing with the plant metabolism like carbon assimilation, carbon oxidation, lipid metabolism, nitrogen metabolism etc.	complex of physical and chemical events of photosynthesis, respiration, and the synthesis and degradation of organic compounds.produces products that aid in the growth and development of plants which are the basic needs for a student to go for further research in future.
CC-XIV-Plant Biotechnology	It is a modern branch of plant science dealing with tissue culture, Recombinant DNA technology, gene transfer methods, and different ways of bio technology applications.	Plant biotechnology, in the sense of the application of recombinant DNA techniques to crop improvement, or the production of valuable molecules in plants, is still a relatively new endeavour. Plants are already used as sources of an immense array of useful molecules. These, especially the starches, proteins and oils in seeds, are raw materials for most of our food and feedstuffs. Plants are also the major sources of fibre for building materials, clothing and paper. Therefore, the possibilities for improving current products and making new products by means of plant biotechnology are, in principle, almost limitless.
DSE-I-Stress Biology	A new branch of botany dealing with plant stress, stress sensing mechanisms, and various ways to protect the plants against stress.	Globally, abiotic stresses are amongst the major limitations for sustainable agriculture. Today's plant science faces a major challenge to achieve the goal of developing climate-resilient crops that can tolerate diverse environmental stresses. Two such major impediments are: a lack of sufficient understanding of the molecular mechanisms of stress response, and technological limitations in translating the proof-of-concept studies from model to crop plants. This can be overcome by knowing the stress obtaing by plants and its irradiation.
DSE-II-Plant Breeding	It deals with modern ideas about plant breeding, methods for crop	Students have a future propeet as Plant breeding is a method of altering the genetic pattern of plants to

PROGRAMME/COURSE	COURSE SPECIFIC OUT COME	LEARNING OUT COME
	improvement etc.	increase their value and utility for human welfare. It is a purposeful manipulation of plants to create desired plant types that are better suited for cultivation, give better yield and are disease resistant.
E-III-Natural resource management	It gives an idea about sustainable utilization of natural resources like land, water, biological properties, national biodiversity, types of forest and their management and energy resources.	Natural resource management refers to the management of natural resources such as land, water, soil, biodiversity, planning and management. It will give a new dimension for the students who will work for conservation of natural resourses for sustainable development.
DSE-IV-Biostatistics	This is an important branch of mathematics in relation to al branches in calculating the accuracy of finding values and putting them for better results.	It is a must study for the students as the goal is to disentangle the data received and make a valid inference that can be used to solve problems in different field of research work and detailed studies.
GE-I-Biodiversity (different type study)	It is the traditional wing of botany dealing with structure and reproduction patterns in bacteria, virus, alga, fungi, bryophytes, pteridophytes and gymnosperms.	A student can gain minimum idea about different plant species including bacteria and virus which will help them to understand the evolutionary trends in plant development and reproductive behaviour.
GE-II-Economic Botany and Plant Biotechnology	This section deals with the importance of economically important plants and also biotechnological chapters like Recombinant DNA Techniques: Blotting techniques: Northern, Southern and Western Blotting, DNA Fingerprinting etc.	A non-botany student can gain modern prospective of the economic uses of the plants as well as the revolutionary developments in biotechnological studies to go beyond the traditional ideas on the subject.

Aims

- To develop an ability to observe, to analyze and to interpret objectively and to make rational decisions and to solve problems involving chemistry.
- To develop manipulative and experimental skills, communicative skills used in the study of chemistry.
- To develop attitudes on
 - which scientific investigations depend, such as curiosity, honesty, persistence, Critical thinking, willingness to suspend Judgment and tolerance of uncertainty.
 - An appreciation of the applications of chemistry in daily life.
 - An understanding of the concepts and theories in chemistry.
 - an awareness of the social, economic, environmental and Technological implications of chemistry
 - An awareness of the provisional nature of explanations about Natural phenomena and the complex relationships between phenomena.

Objectives

- To understand the importance of the Periodic Table of the Elements, how it came to be, and its role in organizing chemical information.
- To understand the interdisciplinary nature of chemistry and to integrate knowledge of mathematics, physics and other disciplines to a wide variety of chemical problems.
- To learn the laboratory skills needed to design, safely conduct and interpret chemical research.
- To acquire a foundation of chemistry of sufficient breadth and depth to enable them to understand and critically interpret the primary chemical literature.
- To develop the ability to effectively communicate scientific information and research results in written and oral formats.
- To learn professionalism, including the ability to work in teams and apply basic ethical principles.
- To provide students with some insight into future career prospect in the fields related to Chemistry.

B.Sc (Chemistry core) Programme

Learning Outcomes

a) Core-I (Inorganic Chemistry)

i) Intellectual skill:

- The ability to demonstrate knowledge and understanding of essential facts, concepts, principles and theories relating to the subject areas identified.
- The ability to apply such knowledge and understanding to the solution of qualitative and quantitative problems mostly of a familiar nature

ii) Practical skill:

- Skills in the operation of standard chemical instrumentation.
- The ability to interpret and explain the limits of accuracy of their own experimental data in terms of significance and underlying theory.

iii) Transferable skill:

- Work independently and collaborate effectively with other people in a team.
- Self-evaluate their own learning progress, and develop motivation and learning skills for lifelong learning.

b) Core-II (Physical Chemistry)

i) Intellectual skill:-

- Formulate and analyze a wide range of analytical and synthetic chemical problems by applying chemical principles.
- Analyze and interpret experimental data, critically assess data in literature and extract data from it useful.

ii) Practical skill:

 The ability to interpret and explain the limits of accuracy of their own experimental data in terms of significance and underlying theory.

- Numeracy and mathematical skills, including such aspects as error analysis order-of-magnitude estimations, correct use of units and modes of data presentation.
- Information retrieval skills, in relation to primary and secondary information sources, including information retrieval through online computer searches

c) Core-III (Organic Chemistry)

i) Intellectual skill:

 Skills in the evaluation, interpretation and synthesis of chemical information and data Skills in the practical application of theory using computer software and models

ii) Practical skill:-

 Conduct standard laboratory procedures involved in synthetic and instrumental work. Operate a range of chemical instrumentation with adequate hands-on experiences.

iii) Transferable skill:-

- Numeracy and mathematical skills, including such aspects as error analysis order-of-magnitude estimations, correct use of units and modes of data presentation
- Information retrieval skills, in relation to primary and secondary information sources, including information retrieval through online computer searches

d) Core-IV (Physical Chemistry)

i) Intellectual skill:-

• The ability to demonstrate knowledge and understanding of essential facts, concepts, principles and theories relating to the subject areas identified

ii) Practical skill:-

- Skills in the operation of standard chemical instrumentation
- The ability to interpret and explain the limits of accuracy of their own experimental data in terms of significance and underlying theory.

- Demonstrate information technology skills, especially in the areas of information retrieval, literature searching and use of library databases.
- Work independently and collaborate effectively with other people in a team.

e) Core-V (Inorganic Chemistry)

i) Intellectual skill:-

 The ability to recognize and analyses problems and plan strategies for their solution Skills in the evaluation, interpretation and synthesis of chemical information and data

ii) Practical skill:-

• Skills required for the conduct of documented laboratory procedures involved in synthetic and analytical work, in relation to both inorganic systems

iii) Transferable skill:-

- Work independently and collaborate effectively with other people in a team.
- Self-evaluate their own learning progress, and develop motivation and learning skills for lifelong learning.

f) Core-VI (Organic Chemistry)

i) Intellectual skill:-

- The ability to apply such knowledge and understanding to the solution of qualitative and quantitative problems mostly of a familiar nature in organic chemistry.
- The ability to recognize and analyze problems and plan strategies for their solution.

ii) Practical skill:-

- Skills required for the conduct of documented laboratory procedures involved in synthetic and analytical work, in relation to organic systems
- Skills in the monitoring, by observation and measurement, of chemical properties, events or changes, and the systematic and reliable recording and documentation thereof

- Numeracy and mathematical skills, including such aspects as error analysis order-of-magnitude estimations, correct use of units and modes of data presentation
- Information retrieval skills, in relation to primary and secondary information sources, including information retrieval through online computer searches

g) Core-VII (Physical Chemistry)

i) Intellectual skill:

 Obtain and integrate several lines of subject-specific evidence to formulate and test hypotheses Recognize the moral and ethical issues of investigations and appreciate the need for ethical standards and professional codes of conduct.

ii) Practical skill

- The ability to interpret and explain the limits of accuracy of their own experimental data in terms of significance and underlying theory.
- Access and manage the risks of chemical substances and laboratory procedures by evaluating their potential impact on the environment.

iii) Transferable skill:-

- Consider strategies for providing effective technical support
- Gain confidence in the support you provide for the science department and students

h) Core-VIII (Inorganic Chemistry)

i) Intellectual skill:-

- Skills in the evaluation, interpretation and synthesis of chemical information and data
- The ability to apply such knowledge and understanding to the solution of qualitative and quantitative problems mostly of a familiar nature

ii) Practical skill:-

- Skills in the operation of standard chemical instrumentation
- The ability to interpret and explain the limits of accuracy of their own experimental data in terms of significance and underlying theory.

- Work independently and collaborate effectively with other people in a team.
- Self-evaluate their own learning progress, and develop motivation and learning skills for lifelong learning.

i) Core-IX (Organic Chemistry)

i)i) Intellectual skill:-

- Show appreciation of chemistry and its interface with social and daily life such as environmental issues, and arouse audience's interest in chemistry.
- Use a global perspective in conjunction with knowledge of science to view issues in chemistry.

ii) Practical skill:-

- Skills required for the conduct of documented laboratory procedures involved in synthetic and analytical work, in relation to organic systems
- Skills in the monitoring, by observation and measurement, of chemical properties, events or changes, and the systematic and reliable recording and documentation thereof

iii) Transferable skill:-

- Demonstrate information technology skills, especially in the areas of information retrieval, literature searching and use of library databases.
- Work independently and collaborate effectively with other people in a team.

j) Core-X (Physical Chemistry)

i) Intellectual skill:-

 Obtain and integrate several lines of subject-specific evidence to formulate and test hypotheses

ii) Practical skill:-

- Skills required for the conduct of documented laboratory procedures involved in synthetic and analytical work, in relation physical systems
- The ability to interpret and explain the limits of accuracy of their own experimental data in terms of significance and underlying theory.

- Demonstrate information technology skills, especially in the areas of information retrieval, literature searching and use of library databases.
- Work independently and collaborate effectively with other people in a team.

k) Core-XI (Organic Chemistry)

i) Intellectual skill:

- The ability to apply such knowledge and understanding to the solution of qualitative and quantitative problems mostly of a familiar nature in organic chemistry.
- The ability to recognize and analyze problems and plan strategies for their solution

ii) Practical skill:-

- Skills required for the conduct of documented laboratory procedures involved in synthetic and analytical work, in relation to organic systems
- Skills in the monitoring, by observation and measurement, of chemical properties, events or changes, and the systematic and reliable recording and documentation thereof

iii) Transferable skill:-

- Numeracy and mathematical skills, including such aspects as error analysis order-of-magnitude estimations, correct use of units and modes of data presentation
- Information retrieval skills, in relation to primary and secondary information sources, including information retrieval through online computer searches

I) Core-XII (Physical Chemistry)

i) Intellectual skill:-

- The ability to demonstrate knowledge and understanding of essential facts, concepts, principles and theories relating to the subject areas identified
- Skills in the practical application of theory using computer software and models

ii) Practical skill:-

 Preparing, processing, interpreting and presenting data, using appropriate qualitative and quantitative techniques, statistical programmes, spreadsheets and programs for presenting data visually.
 Citing and referencing work in an appropriate manner

- Problem-solving skills, relating to qualitative and quantitative information
- Numeracy and mathematical skills, including such aspects as error analysis order-of-magnitude estimations, correct use of units and modes of data presentation

m) Core-XIII (Inorganic Chemistry)

i) Intellectual skill:-

- The ability to apply such knowledge and understanding to the solution of qualitative and quantitative problems mostly of a familiar nature
- The ability to recognize and analyze problems and plan strategies for their solution

ii) Practical skill:-

- Skills in the safe-handling of chemical materials, taking into account their physical and chemical properties including any specific hazards associated with their use and the ability to conduct risk assessments
- Skills required for the conduct of documented laboratory procedures involved in synthetic and analytical work, in relation to inorganic systems.

iii) Transferable skill:-

- Effectively communicate, to a range of audiences, the principles and outcomes of chemistry research using modern IT applications. This will include the presentation of academic posters, oral presentations, writing concise scientific reports and article abstracts.
- Improve your awareness of the practical demands of A level chemistry

n) Core-XIV (Organic Chemistry)

i) Intellectual skill:-

- Skills in the evaluation, interpretation and synthesis of chemical information and data
- Skills in the practical application of theory using computer software and models
- Skills in communicating scientific material and arguments

ii) Practical skill:-

Chemical synthesis, analysis, and problem-solving

- Skills required for the conduct of documented laboratory procedures involved in synthetic and analytical work, in relation to both inorganic and organic systems
- Conduct standard laboratory procedures involved in synthetic and instrumental work

- Communication skills, covering both written and oral communication
- Problem-solving skills, relating to qualitative and quantitative information.
- Work independently and collaborate effectively with other people in a team

Department of political science

Aim of political Science:

Students will acquire a working knowledge of political system. This will include gaining and understanding of the nation's political institution, political culture and political ideologies as well as how public policy is decide upon and implemented.02

Objectives of Political Science:

Present opposing view point and alternative hypotheses on various issues. Effectively apply, reading, witting, Critical thinking and analytical skill to address significant issues in the political world effectively apply social scientific reasoning and theories to the analysis of a wide range of political issues.

PROGRAMME/COURSE	COURSE SPECIFIC OUT COME	LEARNING OUT COME
Core course- 1 Understanding political theory	It introduces thestudents to the idea of political theory, its history and approaches, and an assessment of its critical and contemporary trends. Section B is designed to reconcile political theory and practice through reflections on the ideas and practices related to democracy.	Demonstrate understanding of eadings, analyse texts critically, effectively write papers, increase the quality of student's reading, writing, debate and critical thinking skills Improve student's understanding of how different theories define and approach the issue of development.
Core course- 2 Constitutional government and democracy in India	The course traces the embodiment of some of these conflicts in constitutional provisions, and shows how these have played out in political practice. It further encourages a study of state institutions in their mutual interaction, and in interaction with the larger	This course acquaints students with the constitutional design ofstate structures and institutions, and their actual working overtime. The Indian Constitution accommodates conflicting impulses (of liberty and justice, territorial decentralization and a strong union, for instance) within

PROGRAMME/COURSE	COURSE SPECIFIC OUT COME	LEARNING OUT COME
	extra-constitutional environment.	itself.
Core course- 3 Political theory-concept and debates	Each concept is related to a crucial political issue that requires analysis with the aid of our conceptual understanding. This exercise is designed to encourage critical and reflective analysis and interpretation of social practices through the relevant conceptual toolkit.	This course would help the student familiarize with the basic normativeconcepts of political theory. This course also introduces the students to the important debates in the subject.
Core course- 4 Political process inindia	Actual politics in India diverges quite significantly from constitutionallegal rules. An understanding of the political process thus calls for a different mode of analysis – that offered by political sociology. This course maps the working of 'modern' institutions, premised on the existence of an individuated society.	It familiarizes students with the working of the Indian state, paying attention to the contradictory dynamics of modern state power.
Core course- 5 Introduction to comparative government and politics	This is a foundational course in comparative politics. The purpose is tofamiliarize students with the basic concepts and approaches to the study of comparative politics while analysing various themes of comparative analysis in developed and developing countries.	Students will have a stronger and more informed perspective on approaches to studying politics comparatively. Students will be familiar with the primary theories and concepts that form the building blocks of the subfield, especially as they apply to different states in the world. Students will develop their descriptive capacities and their ability to apply concepts to new country cases. Students will learn research methods and hypothesis writing, testing.
Core course-6	The course provides an	Students should demonstrate

PROGRAMME/COURSE	COURSE SPECIFIC OUT COME	LEARNING OUT COME
Perspectives on Public Administration	introduction to the discipline of public administration. Thispaper encompasses public administration in its historical context with an emphasis on the various classical and contemporary administrative theories. The course also explores some of the recent trends, including feminism and ecological conservation and how the call for greater democratization is restructuring public administration.	understanding of various activities of governmental administrators that fall under the rubric of public administration to include rule-making, rate- making, and other regulatory activities, policy making and the delivery of services and programs.
Core course -7 Perspectives on International Relations And World History	This paper seeks to equip students with the basic intellectual tools for understanding International Relations. It introduces students to some of the most important theoretical approaches for studying international relations. It provides a fairly comprehensive overview of the major political developments and events starting from the twentieth century. Students are expected to learn about the key milestones in world history and equip them with the tools to understand and analyze the same from different perspectives.	Demonstrate understanding basic facts about the world. Demonstrate capacity to theorize or explain political outcomes Demonstrate familiarity with current political debates.
Core course -8 Political Processes and Institutions in	In this course students will be trained in the application of Comparative	Be able to explain the similarities and differences between various types of

PROGRAMME/COURSE	COURSE SPECIFIC OUT COME	LEARNING OUT COME
Comparative Perspective	methods to the study of politics. The course is comparative in both what we study and how we study. In the process the course aims to introduce undergraduate students to some of the range of issues, literature, and methods that cover comparative political.	polities and how they affect their behaviour.
Core course -9 Public Policy and Administration in India	The paper seeks to provide an introduction to the interface between public policyand administration in India. The essence of public policy lies in its effectiveness in translating the governing philosophy into programs and policies and making it a part of the community living. It deals with issues of decentralization.	Students will become familiar with a number of contemporary political issues and better understand their make-up and importance Students will understand the 20th century emergence of the modern administrative state as a result of the technological, social, economic and political pressures that have emerged in as the US industrialized and developed complex, interdependent systems.
Core course -10 Global Politics	This course introduces students to the key debates on the meaning andnature of globalization by addressing its political, economic, social, cultural and technological dimensions. In keeping with the most important debates within the globalization discourse, it imparts an understanding of the working of the world economy, its anchors and resistances offered by global social movements while analyzing the changing nature of	Demonstrate understanding basic facts about the world Demonstrate capacity to theorize or explain political outcomes Demonstrate familiarity with current political debatesDemonstrate skills in critical thinking. Demonstrate knowledge of social scientific inquiry norms and standards.

PROGRAMME/COURSE	COURSE SPECIFIC OUT COME	LEARNING OUT COME
	relationship between the state and trans-national actors and networks.	
Core course -11 Classical Political Philosophy	This course goes back to Greek antiquity and familiarizes students withthemanner in which the political questions were first posed. Machiavelli comes as an interlude inaugurating modern politics followed by Hobbes and Locke.	Students will demonstrate knowledge of key thinkers and concepts Students will compare thinkers on similar concept Students will use concepts to analyze new situations Students will explain the nature and value of normative thinking.
Core course -12 Indian Political Thought-I	This course introduces the specific elements of Indian PoliticalThoughts panning over two millennia. The basic focus of study is on individual thinkers whose ideas are however framed by specific themes. The course as a whole is meant to provide a sense of the broad streams of Indian thought while encouraging a specific knowledge of individual thinkers and texts.	Many Indian thinkers from ancient times have offered thoughts on politics and political institutions. The tradition in India originally has been that state and statecraft and politics were viewed as a part of the general philosophical tradition of the Vedas and Upanishads.
Core course -13 Modern Political Philosophy	Philosophy and politics are closely intertwined. We explore thisconvergence by identifying four main tendencies here. Students will be exposed to the manner in which the questions of politics have been posed in terms that have implications for larger questions of thought and existence.	Students will demonstrate knowledge of key thinkers and concepts Students will compare thinkers on similar concept Students will use concepts to analyse new situations.
Core course -14 Indian Political Thought-II	the course study of individual thinkers, the course introduces a	Demonstrate an understanding of various theoretical perspectives on

	widespan of thinkers and themes that defines the modernity of Indian political thought. The objective is to study general themes that have been produced by thinkers from varied social and temporal contexts.	ethical responsibilities in Indian political life. Demonstrate an understanding of common ethical problems that arise in contemporary politics Demonstrate an understanding of the components of sound ethical judgment.

Aim

The aim of the curriculum is to enlighten the economy through the knowledge of prosperity, management and economic development of the economy. The programs offered by the Department of Economics are designed to

- This curriculum provides all those basic concepts on the branches like molecular biology, genetics, plant breeding, biostatistics, pathology, economic importance of crops, histological display of various plant parts.
- Prepare the student for employment in industry, professional examination like C.A, Banking, Company Secretary, Public Service Commissions for Central and State services, or to pursue graduate work toward such advanced degrees as the M.A. and Ph.D. in economics.
- What goods are produced and in what quantities to be produced by the productive resources which the economy possesses.
- Determination of relative prices and allocation of resources between commodities.
 How the level of national income and employment, aggregate consumption and investment and the general level of prices are determined.

OBJECTIVE

- The development of critical thinking skills and the accumulation of factual knowledge.
- Application of critical thinking to factual knowledge and the development of effective decision Making skills.
- The development of an understanding of Micro and Macroeconomic Theory and their Application to solve economic problems.
- The Development of an Understanding of Basic Statistics, Mathematical Methods for Economics and Regression Analysis and Their Application in Applied Research.
- Offering a diverse selection of courses to foster a broad knowledge base in this field.

N.B: E.C.C(Economics Core Course), U.G(Under Graduate)

	reflect the role of globalization and increased international dependence on the process of development.	development problems at the international level. Critically analyze how economic development theories affect the practical application of development policies in a variety of local and international contexts.

Aims Of Education are given below

- 1. To develop democratic citizenship
- 2. To promote national integration
- 3. To improve vocational efficiency
- 4. To cultivate social, moral & spiritual values
- 5. To instil of scientific temper
- 6. To educate for modernisation
- 7. To attain economic self- suffiency
- 8. To cultivate international brotherhood
- 9. To generate value of ecological balance
- 10. To respect small family norms
- 11. To increase the productivity
- 10. Optimum utilisation of resources
- 12. To develop the feeling of gender indiscrimination
- 13. To transmit, preserve and promote culture

OBJECTIVE:

- 1. To increase physical development of a child
- 2. To provide moral education
- 3. To improve the social and economic efficiency
- 4. To develop the various skills like preparation of timeline, chart, model and aids
- 5. To promote mental health
- 6. To develop community life
- 7. To include love for nation
- 8. To develop the ability of judging, assessing and analysing critically

BA Programme Learning Outcome 1st semester

Core-1: Basic in Education

intellectual skill:

- a. Students will explain the concept of education and its relationship with philosophy.
- b. Describe the contribution of philosophy to the field of education.
- c. Evaluate the impact of western philosophy on Indian education.

Practical Skill:

- a. Appreciate the contribution of various indian schools of philosophy to the field of education.
- b. To develop different ideals and values of various philosophy.

Transferable skill:

- a. Educate others to promote different ideals and valus provided by virous philosopher.
- b. Application of idea principles in once own life

Core-2:

Education and society intellectual skill:

- a. Able or list various agencies of education and their function.
- b. Appreciate the importance of education for social changes

Practical Skill:

- a. Able to be a good citizen in the society.
- b. Able to understand how education change a society.

Transferable skill:

- a. Justify education as a sub system of society and how other sub system effect education.
- b. Able to realise and understand human right education.

Core-3

The learner and learning process intellectual skill:

- a. establish relationship between education and psychology.
- b. explain the concept of learning and factors affecting learning
- c. explain different category of people from different personality type and the type of adjustment

Practical Skill:

- a. explain the application of education psychology in teaching learning process
- b. development and application of creative ability

Transferable skill:

a. reflect the contribution of various learning theories in teaching learning processb. to judge a thing critically with reasoning

Core-4

Pedagogical skill

intellectual skill:

- a. explain the concept of pedagogy
- b. define different method of teaching
- c. list out different approaches and method of teaching

Practical Skill:

- a. different pedagogy from other allied concept
- b. apply appropriate method of teaching in the class room

Transferable skill:

a. belief in practical method like project assignment and activity method

Core-5

Technology and innovation in education

intellectual skill:

- a. explain with example various approaches to educational technology
- b. explain the instructions design and its underlying principles

Practical Skill:

- a. describe different models of teaching and their use in effective class room teaching
- b. explain the concept, principles, modes process and barriers of Communication and its implication

Transferable skill:

- a. prepare tlm while teaching in the class
- b. help other to use ict in the class room teaching learning process

Core-6

Pedagogy of school subjects

intellectual skill:

- a. achieve mastery over different method of teaching
- b. list out different type of teaching learning methods
- c. prepare a design plan

Practical Skill:

- a. develops language skill
- b. apply suitable method while teaching

Transferable skill:

a. to identify and relate everything with learning science

Core-7

Statistics in education

intellectual skill:

- a. describes the importance of statistics in the field of education
- b. develop graphical presentation of data

Practical Skill:

- a. compute relevant measures of average and measures of variation
- b. develop ability of research study

Transferable skill:

- a. makes calculating easily
- b. develops innovative ideas

Core -8

Curriculum development and educational guidance

intellectual skill:

- a. to describe different considerations for curriculum planning
- b. to explain the role of teacher in curriculum development

Practical Skill:

- a. can choose a proper educational curriculum
- b. can choose a proper vocation
- c. can be able to solve personal problem

Transferable skill:

- a. to identify major issues and trends in curriculum
- b. to help others to choose a educational career and right vocation.

core-9

Educational assessment and evaluation

intellectual skill:

- a. to establish the relationship among measurement, assessment and evaluation.
- b. to classify educational objectives in term of specific behavioural from .

Practical Skill:

- a. to list out different types of assessment techniques.
- b. to prepare a good achievement test on any school subject.

Transferable skill:

Use wide range of assessment tools and techniques and contract these appropriately.

Core-10

Introduction to educational research

intellectual skill:

- a. to identify types of research in education
- b. to describe the procedure of preparation of research report.

Practical Skill:

- a. to select and explain an appropriate method for a research study
- b. to select appropriate tools and techniques for the collection of date.

Transferable skill:

a. To develop the innovative and creative india

Core -11

History of education in India

intellectual skill:

- a. To describe education in ancient India, partially Vedic education
- b. To evaluate the education system during British period with special emphasis on different commission and committees.

Practical Skill:

- a. critically examines the education system in medieval India.
- b. understands India her tag and achievement of national goals.

Transferable skill:

a. Transmits promotes and enriches the culture of country

Core-12

Comparative education

intellectual skill:

- a. Explain the scope of comparative education
- b. Critically analyse different curriculum and its structure of various countries.

Practical Skill:

a. Evaluate the curriculum of India with china japan UK and USA

Transferable skill:

a. To list out the factors of comparative education

Core -13

Educational planning, administration and management

intellectual skill:

- a. To elaborate the steps in planning
- b. To elaborate the principles of educational management

Practical Skill:

- a. To describe the score of financing in education.
- b. To choose a proper management planning and guidance

Transferable skill:

a. Properly perform duties on the service on the basics of management in planning

Core-14

contemporary concerns in Indian education

intellectual skill:

- a. To explain the challenges of secondary education.
- b. To explain present scenario of secondary and higher education.

Practical Skill:

a. To understand universalization of primary education and tens to achieve

Transferable skill:

a. To explain and transferable value education, environmental education and life skill education.

Dse-1

ict in education

intellectual skill:

- a. To describe to needed teacher competencies for ict uses in the class room.
- b. To describe the importance of open source of software in education.

Practical Skill:

a. To demonstrate the use of various computer software such as word proceeding and presentation.

Transferable skill:

a. To list and explain various approaches in adoption and use of ict in education.

Dse-2 Special Education intellectual skill:

- a. To explain the innovations and issues of social education.
- b. To understand various educational interventions meant for spacial children.

Practical Skill:

a. To explain the role of resource teacher and special teacher.

Transferable skill:

- a. To become a good teacher to teach disable children.
- b. To identify different type of special category child.

Dse- 3
Distance education

intellectual skill:

- a. To elaborate the curriculum process of distance education
- b. To understand various modes of students support services

Practical Skill:

a. To develop clear idea about different type of distance educational institutions

Transferable skill:

a. To describe the historical perspective of distance education.

Dse -4

intellectual skill:

- a. To develop broad idea about different type of research
- b. Critically analyses the ideas

Practical Skill:

a. Helps to solve various problems of basics of enquiring truth.

Transferable skill:

a. Critically analyse all the problems based on scientific enquiry.

Aims

The study of history is a study of causes. E.H Carr. Man comes and passes by but history goes on telling history. It gives immortality to mortal man. Man invented history of record his own achievements also his failing he wanted the past to live for the present of live for the future. The memory of the bay gone ages and of great among generation is preserved on the pages of history. It teaches us human value morality curriculum knowledge and glimpses of our past for the bliss of leaving.

OBJECTIVE:

A nation without the sense of history has no future. So the objective of reading history is to collect the knowledge form the past and makes a man wise and enable him to strengthen his virtue. It promotes in man power to imagine circumstance and conditions other them his own. It judges an individuals and his past, it teaches he mankind and guide the nation.

C.C-1: History of India—I:

Intellectual skill:

The history of India is long and varied. It is very ancient as well as origin of mankind, growth of the civilization India, Tools and sources of Historical reconstruction.

Transferable skill:

Social stratification of the Aryans their religions believe, value of Vedas, Vedic philosophy etc.

C.C-2: Social Formations and Cultural Patterns of the Ancient

World

Intellectual skill:

Origin and growth of mankind in the world. the primitive man and its habits, tools and weapon change of occupation, nomadic to human settlement.

Transferable skill:

Growth of the society and urbanization and its trade and commerce amongst the civilization which reached in the ? the culture of altheas the states Mendip of Sparta in the Greek culture.

C.C-3: History of India—II

Intellectual skill:

The expansion of agrarian country of India, social stratification, class varna jati untouchably, gender and marriage and succession of property right. Foundation of the empire and its greatness courses the border of Asia.

Transferable skill:

The hoary past of India, when the entire world with the exaction of Egypt and Mesopotamia and nothing by way of civilisation india was fortune enough to be the seat of a great empire boulder like Chandragupta Margay, great monarch like Ashok and its feudal safety.

C.C-4: Social Formations & Cultural Patterns of Odisha

Intellectual skill:

The regional history is no less important the history of Odisha begins since the long past the, but record evidence comes from the event kalinga war of 261 B.C? With great impaired force like Magadha in print of enriched importance.

Transferable skill:

The History of Odisha ruler with the great movement like Kharavela, Bhumakar, the rules of Salidacabhar, Samavansi, Ganjam and the suryavsmisis. The development of its indigenous Art and Architecture, culture language is not the least in formation a state in the best of language during the colonial rule.

C.C-5: History of India-III (C.750-1206)

Intellectual skill:

Fall of the great imperialist monarchy there for The unity and integrity of the imperial power. The growth of feudalism in Indian sub continental history is and the point to be discussion.

Transferable skill:

To know the great Rajputs of India central India and Rasputin, the rastrakutas, poles, Ra, candelas' and chauhans. The proud of urbanization in medieval India the historical traditions.

C.C-6: Rise of Modern West-I

Intellectual skill:

Geographical explanation, the motives of voyage, colonisation. The renaissance in Europe growth of humanism in Europe, and its Art and culture.

Transferable skill:

Rapaid growth of renaissance and reformation its significance, industrialization and green revolution England.

C.C-7: History of India-IV (1206-1550)

Intellectual skill:

the early sultan rules its literacy Turkish tradition, foundation of sultan rule its programme position of kingship during the region of balban and Ala-ud- Khilagi.

Transferable skill:

Bhakti movement religion reformation monotheistic tradition in India Kabir, Nanak, Chaitanya and sultan movement.

C.C-8: Rise of Modern West-II

Intellectual skill:

Europe rises in social and political industrial revolution? Revolution American war and independence.

Transferable skill:

Renaissana its impact, Parliamentary reform, monarchy and the beginning of Prime minister in Great Britain.

C.C-9: History of India-V (C.1550-1605)

Intellectual skill:

Working of the Persian literature in the court affairs invasion of Babur Humayan the administration of Sher Shah and its revenue Administration and general progress.

Transferable skill:

The imperial government religion and rajput alliance Genera attitude of the Administration, land revenue internal and external trade and commerce.

C.C-10: History of India-VI (1605-1750)

Intellectual skill:

the state polity, role pf women in Mughal rule especially during the time of Jahangir and the culture of India in the field of Art and Architecture

Transferable skill:

The turmoil and the war of succession, reverse policies in religion and rajput policy. Rise of feudal poetry, reaction of jat satunarm Rajputs Sikh and Msvellthy.

C.C-11: History of Modern Europe (1780-1939)

Intellectual skill:

the fall of old regime due to the crisis the fall of monarchy and beginning new era the modern age. Rise fall of the great Empire of Napoleon of the Napoleanic regions in Europe.

Transferable skill:

Rise of war states from the turmoil and turning point to the world peace. The rise Italy and Germany. The era of Bismark and his relationship with Great power of Europe.

C.C-12: History of India-VII (1750-1857)

Intellectual skill:

fall of the great empires division of feudal powers, foreign intervention, sunset of empire and growth of British power decline of Indigenous trade industry education etc.

Transferable skill:

Drain of wealth land revenue policy trade and fiscal policy ruination of the Indian peasantry class, social morality and reactions the great uprising Somtala, Deccan and sepoys of India.

C.C-13: History of India-VIII (1857-1950)

Intellectual skill:

Failures led to the succession the Indian renaissance or reformation in the sphere of social, religion political, the rise of nationalism and freedom struggle.

Transferable skill:

Indian freedom struggle the turmsis and transitions to lead the congress, M.K Gandhi and the statyagraha movement, non-violence and quiet India attainment of independence Subash Bose and INA.

Understanding Social-Economic and Cultural Life: Study on

Odisha

Intellectual skill:

the classical literature, Art Architecture, dance and folk literature. Buddhist and Jainism and the remains of Buddhist stupas and viharas.

Transferable skill:

Odisha its political history under the supremacy of sailodbhava, Bhaumakar, Somavansis, Ganga Gajapatiis of the Bhois. Lastly the Mughal rule the Maratha and the Britishes.

AIM:

This subject encourage and enable students to become confident to analyze and solve problems in every situations. It develops clear ideas, understand the concept, think reasonably, be optimistic and develop the character through systematic and orderly habits.

OBJECTIVE: some of the objectives of mathematics are:

- 1.Broad and philosophical in nature
- 2.Explain the relationship between Arts, service and productivity.
- 3. Ability to recall or recognize already learnt information
- 4.Ability to select and apply already learnt rules.
- 5. Ability to judge value of materials and methods.

C.C.1.1

SUB: CALCULUS-1

- 1. Intellectual skill: Introduce the mind to the scientific method of analysis.
- 2. Practical skill: The student can plot graphs of every equation in all the three forms i.e cartesian, parametric and polar.
- 3. Transferable skill: The student can teach their juniors, younger brothers and sisters to be more realistic and think reasonably.

C.C.1.2

SUB: ALGEBRA-1

- 1. Intellectual skill: The students can monitor and manipulate information, suppressing unwanted response, disturbing information, flexible thinking and this subject develops concurrent relationship between mathematics and executive function skills.
- 2. Practical skills: The students will develop arithmetic skill about all the four operations i.e addition, substraction, multiplication and division. He/She will have a clear cut idea about the human relationships.
- 3. Transferable skill:
 - 1. 1. Numerally skill.
 - 2. 2. Verbal communication.
 - 3. 3. Written communication.

- 4. 4. Leadership abilities.
- 5. 5. Research and analytical skills.

C.C.2.1

SUB: REAL ANALYSIS

- 1. Intellectual skill: The student can analyse problems and can draw inferences.
 They will know how to form group & how to do group activities.
- 2. Practical skill: The student can plot the second order family of differential equations, different models, and third order differential equations.
- 3. Transferable skill: After getting the knowledge of real analysis they can analyse the real life problems and solve them.

C.C.2.2

SUB: DIFFERENTIAL EQUATION

- 1.Intellectual skill: The student will be aware of different mathematical models and recognise the application of second order differential equations.
- 2.Practical skill: The student can plot different graph and different models.
- 3.Transferable skill: They can apply the application of differential equations for different research activities.

C.C.3.1

SUB: THEORY OF REAL FUNCTIONS

- 1.Intellectual skills: The students will be aware of the limits of every function. They
 will be more practical and reasonable with the help of this subject. The moral ethics
 will be developed among students.
- 2.Practical skills: They can sketch the continuous graphs and discontinuous curves on graph papers.
- 3.Transferable skills: The subject knowledge can be applied to interpret different important theorems related to real functions. They will know about the ability of expressions of different functions.

C.C.3.2

SUB: GROUP THEORY

- 1.Intellectual skills: The students will develop
 - 1. 1.Symmetry skills
 - 2. 2.Classfying different things
 - 3. 3. Product of groups etc.
- After getting the subject knowledge the students will develop their optimism, "looking into bright sides' i.e the beauty of everything that has been created by god.
- 2.Practical skill: The practical skills, those the students will develop are:
 - 1. a.1.Drawing images correctly
 - 2. b.2.Drawing relations between different groups
- 3.Transferable skills: after having the knowledge of the subject they will apply the drawing the skills in research work. Compare different things what is right and what is wrong.

C.C.3.3

SUB: PARTIAL DIFFERENTIAL EQUATION AND SYSTEM OF ORDINARY DIFFERENTIAL EQUATIONS

- 1.Intellectual skills: The thinking skill of the students will be developed. The investigating skill will be developed.
- 2.Practical skills: They can plot graphs of wave equations. They can also plot surface of the non-homogeneous system of the equations.
- 3.Transferable skill: After getting the knowledge of the subject the students will apply their knowledge for either research work or solving day to day life problems.

C.C.4.1

SUB: NUMERICAL ANALYSIS

- 1.Intellectual skills: The student will learn how to manipulate ideas, concept and think something new. The creativity will be developed among students.
- 2.Practical skills: The students will know how to write the c programs for N-R method, bisection method, secant method and decomposition method, etc...
- 3.Transferable skills: The students will have a clear cut idea about manipulating data, writting c programs etc...Which will help them in higher studies or research work.

C.C.4.2

SUB: RIEMANN INTEGRATION AND SERIES OF FUNCTIONS

- 1.Intellectual skills: The graphical skills 3-D visualization skills, reasoning skills will be developed.
- 2.Practical skills: The students can draw graph and interpret the important theorems based on continuity and differentiability.
- 3. Transferable skills: The students can get the following transferable skills:
 - 1.3-D visualization in higher studies
 - 2. Appearing entrances for higher study.
 - 3. More reasonable and accountable.

C.C-4.3

SUB: RING THEORY AND LINEAR ALGEBRA

- 1.Intellectual skills: The thinking power and decision making skill will be developed.
- 2.Practical skills: The students can find ranks, nullity, Eigen values, and Eigen vectors with help of matrices.
- 3.Transferable skills: They will use this knowledge in higher education or in their career and also they can use this knowledge for research work.

C.C-5.1

SUB: MULTIVARIATE CALCULUS (CALCULUS-2)

- Intellectual skills: The students can think absolutely, reasonably and out accordingly vectorial representation of qualities will be developed among students.
- Practical skill: Drawing graphs of parametric curves, graphical presentation of important theorems.
- Transferable skills: Double integration over rectangular and non-rectangular region will be thought to the students. The students can use this knowledge to draw inferences and use it in research work or in higher studies.

C.C-5.2

SUB: PROBABILITY AND STATISTICS

- 1.Intellectual skills: It will enhance the confidence label of the students and them to think with probability of happening things. The creativity label will be enhanced.
- 2.Practical skills: They can draw the graphs for normal distribution, Bi-nominal distribution and geometrical distribution graph paper.
- 3.Transferable skills: The students can use the probability concept in higher education. This will surely help them to discover things & help them in research work.

C.C-6.1

SUB: MATRIC SPACES AND COMPLEX ANALYSIS

- 1.Intellectual skills: The logical thinking skill drawing truth tables will help them to decide what is right and what is wrong. They will be more practical.
- 2.Practical skills: The graphical presentation of complex numbers. Analytic function, continuous graphs will be well known by the students.
- 3.Transferable skills: This topic will help the students to understand other subjects like physics, chemistry where there is applications of important theorems.

C.C-6.2

SUB: LINEAR PROGRAMMING

- 1.Intellectual skills: The students will be aware of research models and their utility in day-to-day life. Think logically to solve large problems of mathematics using linear programming methods. They will learn to be more laborious and practical.
- 2.Practical skills: They can draw graphs for graphical solution of LPP. Draw tables for simplex methods etc....
- 3.Transferable skills: They will be more expressible in higher studies, research work and in their day-to-day life.

ପସନ୍ଦ ଓ ଆସ୍ଥା ଭିତିକ ପାଠ୍ୟ ଖସଡା

- ଲକ୍ଷ୍ୟ : ଛାତ୍ରଛାତ୍ରୀ ମାନଙ୍କର ଅନ୍ତର୍ନିହିତ ଚିନ୍ତା ଓ ଚେତନା ଶକ୍ତିର ପୂର୍ଣ୍ଣ ବିକାଶ ଘଟାଇବା ଏବଂ ସେମାନଙ୍କୁ ଜୀବନ ଓ କର୍ମ ସଂସ୍ଥାନ କ୍ଷେତ୍ରର ପୂର୍ଣ୍ଣ ସାମର୍ଥ୍ୟର ସହିତ ପ୍ରସ୍ତୁତି କରାଇବା ।
- ଉଦ୍ଦେଶ୍ୟ : ଛାତ୍ରଛାତ୍ରୀ ମାନଙ୍କଠାରେ ମାନବିକ ମୂଲ୍ୟବୋଧର ଉଦ୍ରେକ କରି ସାମାଜିକ କଲ୍ୟାଣ କ୍ଷେତ୍ରରେ ପ୍ରେରଣା ଯୋଗାଇବା ଏବଂ ସେମାନଙ୍କ ବ୍ୟକ୍ତିଷ୍ଟର ବିକାଶ ସାଧନ ଘଟାଇବା ସଙ୍ଗେ ସଙ୍ଗେ ଆତ୍ମନିର୍ଭରଶୀଳ କ୍ଷେତ୍ରରେ ସାହାର୍ଯ୍ୟ କରିବା ।

ପ୍ରଧାନ ପାଠ୍ୟାଂଶ-୧

[ଓଡିଆ ସାହିତ୍ୟର ଇତିହାସ]

- ଲକ୍ଷ୍ୟ : ଛାତ୍ରଛାତ୍ରୀ ମାନଙ୍କ ଭାଷାଭିତ୍ତିକ ଦକ୍ଷତାର ଅଭିବୃଦ୍ଧି କରିବା ତଥା ଓଡିଆ ଭାଷା ଓ ସାହିତ୍ୟ ସହିତ ପରିଚିତ କରାଇବା ।
- ଉଦ୍ଦେଶ୍ୟ : ଓଡିଆ ଭାଷାର ବିକାଶ ଦିଗରେ ସଚେତନ କରାଇବା ଏବଂ ବିଶ୍ୱୟରରେ ଓଡିଆ ଭାଷା ସାହିତ୍ୟର ପ୍ରଚାର କରିବା । ପ୍ରାଚୀନ,ମଧ୍ୟଯୁଗୀୟ ଗଦ୍ୟ ଓ ପଦ୍ୟ ସାହିତ୍ୟ ସହିତ ଛାତ୍ରଛାତ୍ରୀ ମାନଙ୍କୁ ପରିଚିତ କରାଇବା ଏବଂ ତତ୍ ସମ୍ପର୍କିତ ଭାଷାଜ୍ଞାନର ଅଭିବୃଦ୍ଧି ଘଟାଇବା ।
- ଶିକ୍ଷଣ ଫଳାଫଳ : ଛାତ୍ରଛାତ୍ରୀମାନେ ଓଡିଆ ଭାଷାର ଇତିହାସ ଆଲୋଚନାରୁ ସଫଳତା ପୂର୍ବକ ପୁଞ୍ଜାନୁପୁଙ୍ଗ ଜ୍ଞାନ ଆରୋହଣ କରିବା ଏବଂ ସେହି ଭାଷାକୁ ଆଧାର କରି ନୂତନ ସାହିତ୍ୟ ସୃଜନ କରିବାରେ ସକ୍ଷମ ହୋଇପାରିଛନ୍ତି ।

ପଧାନ ପାଠ୍ୟାଂଶ -୨

[ଓଡିଆ ସାହିତ୍ୟର ଇତିହାସ]

- ଲକ୍ଷ୍ୟ : ଛାତ୍ରଛାତ୍ରୀ ମାନଙ୍କଠାରେ ଓଡିଆ ଭାଷା ସମ୍ପର୍କିତ ଗଭୀର ଜ୍ଞାନ ସୃଷ୍ଟି କରିବା। ଓଡିଆ ଭାଷା ସହିତ ସୁପରିଚିତ କରାଇବାସହ ସେମାନଙ୍କଠାରେ ଭାଷାଭିଭିକ ଦକ୍ଷତାର ପୂର୍ଣ୍ଣ ମାତ୍ରାରେ ବିକାଶ ଲାଭ କରାଇବା।
- ଉଦ୍ଦେଶ୍ୟ : ବ୍ୟାକରଣ ବ୍ୟତୀତ ଗୋଟିଏ ଭାଷାର ଶୁଦ୍ଧ ଓ ମାର୍ଜିତ ରୂପ ପରିକଳ୍ପନା ଅସୟବ । ଏହାକୁ ଦୃଷ୍ଟି ଆଗରେ ରଖି ଛାତ୍ରଛାତ୍ରୀ ମାନଙ୍କ ଦୈନନ୍ଦିନ ଜୀବନରେ ବ୍ୟବହୃତ ଭାଷାକୁ ସଂଶୋଧନ କରିବା ପାଇଁ ବିଶେଷ୍ୟ,ବିଶେଷଣ,ସର୍ବନାମ,ଅବ୍ୟୟ,କ୍ରିୟା ଆଦି ବ୍ୟାକରଣ ତତ୍ତ୍ୱ ସମ୍ପର୍କିତ ଜ୍ଞାନ ସୃଷ୍ଟି କରିବା ।
- ଶିକ୍ଷଣ ଫଳାଫଳ : ଆଲୋଚନା ପର୍ଯ୍ୟ ।ଲୋଚନାରୁ ଅବଗତ ହୋଇଅଛୁ ଯେ,ଉପର ଲିଖିତ ଆଲୋଚିତ ବ୍ୟାକରଣ ତତ୍ତ୍ୱକୁ ଛାତ୍ରଛାତ୍ରୀମାନେ ପୂର୍ଣ୍ଣ ମାତ୍ରାରେ ଜ୍ଞାନ ଆରୋହଣ କରିବା ସହ ବ୍ୟବହାରିକ ଦିଗ କ୍ଷେତ୍ରରେ ତା'ର ସଫଳ ପ୍ରୟୋଗ କରିବାରେ ସକ୍ଷମ ହୋଇ ପାରିଛନ୍ତି ।

ପ୍ରଧାନ ପାଠ୍ୟାଂଶ -୪

[ଓଡିଶାର ସାଂସ୍କୃତିକ ଅନୁଶୀଳନ]

- ଲକ୍ଷ୍ୟ : : ଓଡିଶାର କଳା,ସାହିତ୍ୟ,ଅଭିନୟ,ଭାୟର୍ଯ୍ୟ,ଚାଲିଚଳଣି,ସାମାଜିକ ଜୀବନ,ଓଷାବ୍ରତ ଏପରିକି ଝୋଟି ମୁରୂଜ- ପ୍ରତ୍ୟେକରେ ସଂସ୍କୃତିର ଏକ ଗୋପନୀୟ ବିଜ୍ଞପ୍ତି ଆତ୍ମଗୋପନ କରିଛି । ତାକୁ ଉକ୍କୋଚିତ କରି ଓଡିଆ ସଂସ୍କୃତିର ମହନୀୟତା ସମ୍ପର୍କରେ ଛାତ୍ରଛାତ୍ରୀମାନଙ୍କୁ ଅବଗତ କରାଇବା ହେଉଛି ଏହି ପାଠ୍ୟାଂଶର ଲକ୍ଷ୍ୟ ।
- ଉଦ୍ଦେଶ୍ୟ :ଓଡିଶାର ସାଂଷ୍କୃତିକ ପୃଷ୍ଠଭୂମି ସମ୍ପର୍କରେ ପାଠକକୁ ଅବହିତ କରିବା । ଓଡିଶାର ପର୍ବପର୍ବାଣି,ଓଷ।ବ୍ରତ ବିଭିନ୍ନ ପ୍ରସିଦ୍ଧି ଦୈବୀପୀଠର ମାହାମ୍ୟ ଏବଂ କଳା ଚାତୃର୍ଯ୍ୟର ସାଂଷ୍କୃତିକ ନିଦର୍ଶନ ପ୍ରଦାନ କରିବା ।
- ଶିକ୍ଷଣ ଫଳାଫଳ : ଓଡିଶାର ସାଂସ୍କୃତିକ ଅନୁଶୀଳନ ଆଲୋଚନା ପରେ ଛାତ୍ରଛାତ୍ରୀ ମାନଙ୍କ ମଧ୍ୟରେ ସଂସ୍କୃତି ପ୍ରତି ଅଭିରୁଚି ଏବଂ ତାହାକୁ ବିଶ୍ୱଦରବାରରେ ପହଞ୍ଚାଇବାର ଦୃଢ ଆତ୍ମବଳ ସୃଷ୍ଟି ହୋଇ ପାରିଛି ।

ପଧାନ ପାଠ୍ୟାଂଶ -୫

[ଓଡ଼ିଆ ଲୋକ ସାହିତ୍ୟ]

- ଲକ୍ଷ୍ୟ : ମାନବ ଜୀବନ ଜିଜ୍ଞାସା ଓ ମନୀଷାର ରସାଳ ଅଭିବ୍ୟକ୍ତି ହେଉଛି ଲୋକ ସାହିତ୍ୟ । ଏହି ସାହିତ୍ୟ ସମୂଦ୍ରପରି ଅଥଳ ଏବଂ ସାଗର ପରି ଅପରିସୀମ । ଏଥିରେ ସାଧାରଣ ଜନତାର ସୁଖ,ଦୁଃଖ,ହସ କାନ୍ଦର ପ୍ରତିବିଦ୍ଦିତ ହୋଇଅଛି । ତେଣୁ ଛାତ୍ରଛାତ୍ରୀ ମାନଙ୍କୁ ଏହି ସାହିତ୍ୟର ନିହିତ ଜୀବନଚର୍ଯ୍ୟା ଉପଲବ୍ଧି କରାଇବା ମୁଖ୍ୟ ଲକ୍ଷ୍ୟ ଅଟେ ।
- ଉଦ୍ଦେଶ୍ୟ : ସମୟରେ ଘୂର୍ଣ୍ଣନ ଚକ୍ରରେ ତଥା ସମୟର ପରିବର୍ତ୍ତନରେ ସହ ପରିବର୍ତ୍ତିତ ରୂପ ଧାରଣ କରିଛି ସାହିତ୍ୟ । ଏହି ସାହିତ୍ୟ କେଁଉ ଅନାଦି କାଳରୁ ଲୋକ ମାନଙ୍କୁ ମୁଖରୁ ପ୍ରସାରିତ ହୋଇ ତା'ର କଳେବରକୁ ବୃଦ୍ଧି କରିଅଛି । ସେହି ସମୟରେ ସୃଷ୍ଟି ହୋଇଥିବା କଳା ସାହିତ୍ୟ ଓ ସଂସ୍କୃତିକୁ ଛାତ୍ରଛାତ୍ରୀ ମାନଙ୍କ ଦ୍ୱାରା ସଂସାଧିତ କରି ତାହାର କିପରି ବିଶ୍ୱ ଦରବାରରେ ନିଜର ପରିଚୟ ସୃଷ୍ଟି କରିପାରିବ ତାହା ହିଁ ଉକ୍ତ ପାଠ୍ୟାଂଶ ଉଦ୍ଦେଶ୍ୟ ।
- ଶିକ୍ଷଣ ଫଳାଫଳ : ଛାତ୍ରଛାତ୍ରୀମାନେ ଲୋକ ସାହିତ୍ୟର ଅଧ୍ୟୟନ ପୂର୍ଣ୍ଣ ଆଗ୍ରହ ସହକାରେ ସମ୍ପାଦନ କରିବା ସହ ଏହାକୁ ସୀମିତ ପରିସୀମା ମଧ୍ୟରେ ଆବଦ୍ଧ ନ ରଖି ବିଶ୍ୱବ୍ୟାପି କରାଇବାକୁ ଯତ୍.ପର ନାସ୍ତି ଉଦ୍ୟମ କରି ଆସୁଛନ୍ତି।

Course Outcome (CO): Course-Public Relations & Corporate Communication

- CO1: Identify, understand, and apply contemporary theories of leadership to a wide range of situations and interactions
- CO2: Employability skills time and resource management, conflict resolution, teaching and mentoring others
- CO3: Help students understand the communication process, its benefits and challenges
- CO4: Collaborate: students will develop the strategies to work with others to achieve specific goals
- CO5: Learn to evaluate and improve upon personal leadership strengths and weaknesses

V SEMESTER

Course Outcome (CO): Course- Entrepreneurship Development

CO1: Understand the importance of Entrepreneurship in present era.

CO2: Acquire knowledge on establishment and policies of Small-Scale Industries.

CO3: Formation and future prospectus of Small scale Industries.

CO4: The practical exposure to prepare Business plan for future Startups.

CO5: To analyze the role of Financial Institutions in encouraging future Entrepreneurs.

Course Outcome (CO): Course- IFRS

CO1: Understand the need of IFRS

CO2: Acquaint with the internationally accepted accounting standards

CO3: Convergence with existing indian standards

CO4: Prepare financial reports: as per requirement under Ind AS and IFRS

CO5: Understanding the difference between old standards and IFRS

Course Outcome (CO): Course-Income Tax -I

CO1: Understand difference between Income tax bill and Act.

CO2: Application of Provisions relating to various Heads of Income.

CO3: To enable student's analysis the taxability of various heads of income.

CO4: To understand the deductions and exemptions for various heads

CO5: To familiarize the function and structure of CBDT

Course Outcome (CO): Course- Costing Methods

CO1: To familiarize students with the basic concepts of cost and various methods and techniques of costing.

CO2: Identify the specifics of different costing methods.

CO3: Application of costing methods to both manufacturing and service industry.

CO4: To be able to analyze and evaluate information for cost ascertainment, planning, Control and decision making

CO5: Summarize process, job, batch Costing and prepare a process cost report.

Course Outcome (CO): Course- Advanced Accounting (Elective 1)

CO1: Preparation of different schedules with respect to final accounts of Banking companies.

CO2: Preparation of financial statements of Life Insurance Company

CO3: Preparation of financial statements of General Insurance Company

CO4: Students will learn relevant financial accounting career skills, applying both quantitative and qualitative knowledge to their future careers in business.

CO5: Able to demonstrate knowledge of various advanced accounting issues related to Financial Accounting within a global and or ethical framework

Course Outcome (CO): Course-Goods and Services Tax (Elective 2)

CO1: understanding the need and importance of GST in India over the old taxes

CO2: Assessment and Payment of GST

CO3: Availing the benefits of Input tax credit and adjustments.

CO4: To understand Dual GST structure in India.

CO5: To enable students analyze the provisions under GST Act.

Course Outcome (CO): Course-International Financial Mgmt (Elec 1 – Fin)

CO1: To familiarize students with the concept of Financial Management, Financial markets and intermediaries.

CO2: Identify and appraise investment opportunities in the international environment.

CO3: Understanding host country's Environment, Application of the techniques of Investment Appraisal and Capital Rationing.

CO4: To enable them to know Capital structure theories, valuation of shares, debt and Risk management techniques.

CO5: Understand international capital and foreign exchange market.

VI SEMESTER

Course Outcome (CO): Course- Business Regulations

CO1: To familiarize students with the basic elements of Law, contract, Agreement & Breach of Contract.

CO2: Explain the concepts in business law to current business environment.

CO3: Integrate concept of business law with foreign trade.

CO4: Understanding in detail the sale of goods act, Competition act and rights & duties of Consumer protection Act.

CO5: Overview of FEMA Provisions, Grant of Patents and Environment Protection Act.

Course Outcome (CO): Course- Principles & Practices of Auditing

CO1: To familiarize and educate students on the Auditing concepts.

CO2: Critically evaluate the role and responsibilities of the external auditor and the audit process

CO3: Appraise the legislative and professional provisions (auditing standards and ethical guidelines) that constitute the regulatory framework for the conduct of external auditing.

CO4: Formulate how the auditor obtains an understanding of the entity and its environment, when planning and assessing the risk of the audit.

CO5: To familiarize the students of the audit procedure of different types of undertakings.

Course Outcome (CO): Course-Income -Tax II

CO1: To make students know Tax structure in India.

CO2: To make student understand the procedure adopted by government to compute the tax liability on Incomes

CO3: To enable students to get familiarized with various Provisions relating to Deductions.

CO4: To enable students analyse the various sources of Incomes which are taxable and which are exempt under the Act.

CO5: To familiarize the students with the authorities for Levy and Collection of taxes .

Course Outcome (CO): Course- Management Accounting

CO1: To familiarize the students with various principles and Techniques of Management Accounting.

CO2: Enable them acquire skills needed to analyze

CO3: Interpret the performance of the firm through preparation of financial statement.

CO4: To make students apply accounting ratios to extract the financial performance of the firm.

CO5: Understand change in financial position through preparation of fund flow and cash flow analysis

Course Outcome (CO): Course- Business Taxation

CO1: Understand the procedure by government to compute the tax liability on Imports and exports.

CO2: Analyze the provisions of taxability on businesses like Company and Partnership firm.

CO3: Importance of E-filing of returns with availability of different forms and dates for payment and filing it.

CO4: Enable students to analyse tax structure in India.

CO5: Knowledge of slab rates and turnover limits for tax purpose.

Course Outcome (CO): Course-Cost Management

CO1: Calculation of different elements in marginal costing like ratios, fixed and variable cost

CO2: How to prepare different types of budget

CO3: Differentiate between the traditional costing system and how it will be effective in Activity Based Costing.

CO4: Evaluate different variance especially Material variance and Labour variance

CO5: Conceptual procedure of different methods applied in cost control and cost reduction

Course Outcome (CO): Course-Performance Management (Fin. Elec)

CO1: Understanding the techniques of decision making like marginal costing and standard costing.

CO2: To make students to understand the difference between the traditional costing system and how it will be effective in activity based costing.

CO3: To make student understand the procedure of different methods applied in cost control and cost reduction.

CO4: Understanding different types of budgets

CO5: Understanding the concepts of management reporting and management information systems.

Course Outcome (CO):Course-International Audit & Assurance (Fin. Elec)

CO1: Evaluate the nature, purpose and scope of an audit and the legal, regulatory and ethical framework for auditing.

CO2: Identify procedures required to evaluate control risk.

CO3: Analyse the nature of internal control systems related to audit including IT systems.

CO4: Formulate how the auditor obtains an understanding of the entity and its environment, when planning and assessing the risk of the audit.

CO5: To familiarize the students of the audit procedure of different types of undertakings.

PSO's of B.Sc. Zoology

- **PSO 1**: Analyse the general characters, classification and evolutionary significance of non-chordates (Protista to pseudocoelomates).
- **PSO 2:** Understand the basic concepts of ecology, its components and biostatistics.
- **PSO 3**: Analysis the general characters, classification and evolutionary significance of coelomate non chordates.
- **PSO 4:** Understand the structural organization, histology, functions and mechanism of the life sustaining systems.
- **PSO 5 :** Understand the origin, distribution, classification, characters and special features of all chordates starting from most primitive forms (protochordates) to the most advanced forms (mammals).
- **PSO 6:** understand the structure, histology and functioning of the controlling and co-ordinating systems.
- **PSO 7:** Analyse the relationship between different vertebrate groups with respect to the anatomy of different systems.
- **PSO 8:** Understand the biochemistry and various metabolic processes associated with organic compounds.
- **PSO 9 :** Understand the structure and functions of various cellular organelles.
- **PSO 10:** Understand the concepts of Mendelian genetics, chromosomal mapping, mutations controlling our systems, mechanism of sex determination, extra chromosomal inheritance.
- **PSO 11:** Understand the different aspects of animal development at different embryonic stages and application of these concepts in modern fields of research biology.
- **PSO 12:** Understand the structure of DNA, DNA replication, transcription, translation and regulatory factors controlling the above processes.
- **PSO 13:** Understand the basic concepts of human defense mechanism, the cells/organs and their secretions involved in the different immunological responses and the application of these concepts in modern biotechnology.
- **PSO 14**: Analyse the evolution of different forms of life and the forces controlling them.

Course outcomes

Core-1

Diversity and Evolution of Non-chordata (Protista to Pseudocoelomates).

- CO 1: Discuss about the general characteristics, classification upto classes, locomotion and reproduction in Protista. Give an account of life cycle, pathogenicity and prophylaxis of *Plasmodium vivax*, *Trypanosoma gambiens* and *Entamoeba histolytica*.
- CO 2: Describe the general characters and classification upto classes of phylum porifera and ctenophore. Give an account of canal system in sponges. Discuss about the general characters and evolutionary significance of parazoa and metazoa.
- CO 3 : Discuss about the general characteristics and classification upto classes of phylum cnidarian, corals and coral reefs.
- CO 4: Give an account of the general characteristics and classification upto classes of phylum Platyhelminthes. Describe the life cycle, pathogenicity and prophylaxis along with parasitic adaptation of *Fasciola hepatica* and *Taeniasolium*.
- CO 5 : Describe the general characteristics and classification upto classes of phylum nemathelminthes. Discuss about the life cycle, pathogenicity, prophylaxis and parasitic adaptation of *Ascarislumbricoides* and *Wuschereriabancrofti*.

Perspective in Ecology and Biostatistics.

- CO 1: Write the relevance of studying ecology. Briefly describe the history of ecology. Discuss the laws of limiting factors. Describe light and temperature as ecological factors along with their effects. Write notes on food chain, food web, energy flow through the ecosystem and ecological pyramids.
- CO 2: Describe the characteristics of population. Give an account of different patterns of population growth. Discuss about population regulation and population interactions. Discuss Gause' Principle. Write a note on Lotka-Volterra equation for competition and predation.
- CO 3: Discuss the different characteristics of community. Write notes on ecotone and edge effect. Discuss ecosystem development (succession) with examples. Give an account of the theories pertaining to climax community. Write notes on nutrient and biogeochemical cycles.
- CO 4: Give an account of the different types of biodiversity and their significance. Discuss about causes of loss of biodiversity. Describe in detail about the different types of conservation strategies. Write note on endangered species concept. Discuss the role of ZSI, WWF, IUCN, Wildlife (protection) Act. 1972.
- CO 5: What is biostatistics. Discuss its concept and scopes. Discuss the measures of central tendency. Describe the measures of dispersion with relation to standard deviation. Write notes on Chi-square test, T test and Z test. Explain the analysis of correlation and regression. Write on data analysis using EXCEL programme.

Diversity and Evolution of Non chordates (Coelomate Non chordates)

- CO 1 : Describe the general characteristics and classification upto classes of phylum Annelida. Write notes on coelom, metamerism and excretion in Annelidas.
- CO 2: Write down the general characteristics and classification upto the classes of phylum Arthropoda. Discuss about vision and respiration in Arthropodas. Write notes on moulting, metamorphosis and social life in insects. Give an account of larval forms of crustacea.
- CO 3 : Describe the general characteristics and evolutionary significance including affinities of peripatus.
- CO 4 : Give an account of general characters and classification upto classes of phylum Mollusca. Describe respiration, torton and detorton in Mollusca. Write notes on pearl formation in bivalves and evolutionary significance of trochophore larva.
- CO 5 :Discuss about the general characteristics and classification upto classes of phylum Echinodermata. Write notes on larval forms and evolutionary significance of Echinodermata. Give an account of water vascular system in Asteroids i.e. starfish.

Physiology- life Sustaining Systems.

- CO 1: Describe the structural organization, histology and functions of alimentary canal and its associated glands. Discuss about the physiology of digestion and absorption of food.
- CO 2: Write down the histology of the respiratory organs and the mechanisms of respiration.
- CO 3: Discuss about the structure of the kidney and the mechanism of urine formation and its regulation.
- CO 4: Describe the composition and functions of blood. Write a note on the mechanism of blood coagulation and blood related disorders.
- CO 5: Discuss about the structure of the heart, coronary circulation, conduction of cardiac impulse, cardiac cycle. Write a note on nervous and chemical regulation of heart beat.

Diversity and Distribution of Chordata.

- CO 1: Discuss about the different theories related to origin of phylum Chordata. Describe the different characteristics of the three different classes of subphylum Protochordata. Write notes on the larval forms of protochordates and retrogressive metamorphosis in Urochordata.
- CO 2: Give an account of the advanced features of vertebrates over protochordates. Identify the general characteristics and classification of Cyclostomes upto class. Write notes on the structural peculiarities and affinities of *Petromyzon* and *Myxine*.
- CO 3: Describe the general characteristics and classification of chondrichthyes, osteichthyes and Amphibia upto orders. Write notes on the types of parental care in fishes and amphibians. Discuss on migration, osmoregulation and scales of fishes. Write a note on origin of tetrapoda.
- CO 4: Identify the general characteristics and classification of clasessReptilia and Aves upto orders. Write a note on skull in Reptiles, affinities of *Sphenodon*, poison apparatus and biting mechanism in snakes. Give an account of principles and aerodynamics of flight, flight adaptations and migration in birds. Write a note on *Archaeopteryx* as a connecting link.
- CO 5: Discuss the general characteristics and classification of mammals upto orders. Write notes on affinities of Prototheria and Metatheria, dentition in mammals. Discuss about the adaptive radiation in mammals with reference to locomotory appendages. Givean account of the zoological realms and theories pertaining to the distribution of animals in different realms.

Physiology- Controlling and Coordinating Systems.

- CO 1 : Study the structure, location, functions and types of different tissues.
- CO 2: Discuss about the structure of neuron, mechanism of transmission of nerve impulse. Write a reflex action and its mechanism. Describe the physiology of hearing and vision.
- CO 3: Describe the histology of different types of muscles, mechanism of muscle contraction and characteristics of muscle.
- CO 4: Discuss about the histology and physiology of male and female reproductive systems. Write a note on methods of contraception.
- CO 5: Describe the histology of different endocrine glands, the hormones secreted by them, their functions and disorders.

Comparative Anatomy of Vertebrates.

- CO 1: Describe the structure, functions and derivatives of integumentary system. Give a comparative account of the axial and appendicular skeleton in different vertebrates. Give an account of jaw suspensorium in vertebrates.
- CO 2: Give a comparative account of alimentary canal and associated glands in different groups of vertebrates. Describe skin, gills, lungs and air sacs as respiratory organs in different vertebrates. Write a note on accessory respiratory organs in fishes.
- CO 3: Write a note on general plan of circulation in vertebrates. Give an account of the comparative anatomy of heart in different group of vertebrates. Add a note on its evolution. Discuss about the evolution of aortic arches in vertebrates.
- CO 4: Write a note on succession of kidney in vertebrates. Explain the evolution of urinogenital ducts in different vertebrates.
- CO 5: Give a comparative account of brain in different vertebrates. Write notes on autonomic nervous system, spinal cord, spinal nerves and cranial nerves in mammals. Classify the different types of receptors found in vertebrates.

Biochemistry and Metabolic Processes.

- Co 1 : Describe the structure and properties of carbohydrates, lipids and proteins.
- Co 2: Discuss about cellular respiration, Glycolysis, Krebs cycle, Pentos phosphate pathway, Gluconeogenesis, Glycogenolysis and Glycogenesis.
- Co 3 : Write notes on β -oxidation of fatty acids.
- Co 4 : Describe protein metabolism.
- Co 5 : Describe about the kinetics and mechanism of enzyme action. Write a note on electron transport chain.

Cell Biology.

- CO 1: Differentiate between prokaryotic and eukaryotic cells. Write notes on mycoplasma, virus, viroid, virisions and prions. Describe the various models of plasma membrane. Describe the mechanism of transportation across membrane. Give an account of the structure and functions of different types of cell junction.
- CO 2 : Give an account of the structure, functions and semiautonomous nature of mitochondria. Describe the structure and functions of the endoplasmic reticulum. Describe about the structure and functions of the Golgi apparatus. Write down the structure and functions of the lysosomes. Write notes on mechanism of vesicular transport, chemiosmotic hypothesis, endosymbiotic hypothesis and peroxisomes.
- CO 3: Give an account of the structure and functions of different types of cytoskeleton describe the ultrastructure and functions of nucleus. Discuss about the structure and functions of nucleolus. Write notes on nuclear envelope, structure of nuclear pore complex, chromosomal DNA and its packaging.
- CO 4 : Describe cell cycle and its regulation. Discuss about signaling molecules and their receptors.
- CO 5: What is apoptosis. Discuss about its extrinsic and intrinsic pathways. Discuss about the growth and development of tumors and metastasis.

Principles of Genetics.

- CO 1: Write the principles of inheritance including sex-linked inheritance. Discuss about incomplete dominance and co-dominance. Describe multiple alleles and lethal alleles. Give an account of epistasis and pleiotrophy.
- CO 2 : Discuss the different types and mechanisms of linkage. Give an account of the types and molecular mechanisms of crossing over. Describe the different types of hybridization.
- CO 3: Describe the molecular basis of mutation and its types. Write down the different methods of detection of mutations. Give an account of the DNA repair mechanisms.
- CO 4: Write down the chromosomal methods of sex determination. Describe the sex-linked influenced and sex linked characters. Give an account of the roles of polygenic inheritance and transgressive variations in evolution.
- CO 5 : Give an account of the criteria for extra chromosomal inheritance. Discuss the antibiotic resistance in *Chlamydomonous*. Describe mitochondrial mutations and maternal effects.

Developmental Biology.

- CO 1: Discuss about the history and basic concepts of developmental biology. Give an account of the different types of cell-cell interaction, patterns of formation, differentiation and growth, gene expression, cytoplasmic determinants and asymmetric cell division.
- CO 2: Discuss the process of spermatogenesis and oogenesis. Give an account of the different types of egg and egg membranes. Describe the mechanism of fertilization, changes in the gametes involved in the process and incidence of monospermy and polyspermy. Discuss about the planes and patterns of the cleavage. Describe the early development of frog and chick upto gastrulation. Give an account of the different types of the fatemaps. Discuss the concept of embryonic induction. Describe the organizer concept.
- CO 3: Discuss about the fate of different embryonic germ layers. Give an account of the extra embryonic membranes in bird. Discuss about the implantation of embryo in human. Describe the structure, types and functions of placenta.
- CO 4 : Give an account of the changes and hormonal regulation of metamorphosis in amphibians. Describe the different modes of regeneration. Discuss the concept and models of aging.
- CO 5: What is teratogenesis. Discuss its causative agents and their effects on embryonic development. Discuss about in vitro fertilization, stem cell culture and amniocentesis.

Molecular Biology.

- CO 1: Describe the history and structure of DNA. Discuss the structure of RNA and its types. Give an account of the DNA replication in prokaryotes and eukaryotes and its types.
- CO 2: Describe the mechanism of transcription in eukaryotes and prokaryotes and factors regulating transcription. Give an account of the synthesis of rRNA and mRNA.
- CO 3 : Give an account of the genetic code and Wobble hypothesis. Describe the process of protein synthesis in prokaryotes. Give an account of the structure of ribosome. Discuss the difference between prokaryotic and eukaryotic translation.
- CO 4 : Describe the structure of globin mRNA. Discuss the splicing mechanism. Give an account of exon shuffling and RNA editing.
- CO 5 : Give an account of transcription in eukaryotes and its regulation. Discuss gene silencing and genetic imprinting. Describe RNA interference miRNA and siRNA.

Immunology.

- CO 1: Give an account of the histological perspective and early theories of immunology. Discuss the different types of immune responses and cells/organs associated with these responses. Discuss the different types of dysfunctions of immune system.
- CO 2: Discuss the different properties of immunogens and the factors influencing the immunogenicity. Write notes on adjuvents, haptens and epitopes.
- CO 3: Give an account of the structure and functions of different classes of immunoglobulins. Discuss the antigen-antibody interaction. Write notes on immunoassay, polyclonal sera, monoclonal antibodies and hybridoma technology.
- CO 4: Discuss the structure and functions of exogenous and endogenous pathways of antigen presentation. Discuss the components and pathways of complement activation.
- CO 5: Discuss the properties and functions of cytokines in addition to cytokine based therapies. Discuss the different types of hypersensitivities as per Gell and Coomb classification. Discuss the different types of vaccines in addition to DNA vaccines and recombinant vaccines.

Evolutionary Biology.

- CO 1: Describe different theories on origin of life. Discuss the major events in history of life. Give an account of five major extinctions and their background. Adding a note on role of extinction in evolution.
- CO 2: Discuss about the different evidences of evolution with examples. Write a note on types of fossils and the process of dating of fossils based on molecular clock concept. Give an account of phylogeny of horse and human.
- CO 3: Write a note on the roles of different types and factors of natural selection in the process of evolutionary change. Give an account of the sexual selection and artificial selection contributing to the process of evolution. Discuss the roles of variations and isolations in evolution.
- CO 4: Give an account of gene frequencies and shifts in gene frequencies with and without selection. Write a note on Hardy-Weinberg equilibrium. Discuss gene pool, gene flow and genetic drift.
- CO 5: Describe different species concepts along with their advantages and limitations. Give an account of modes of speciation. Write a note on macro evolutionary principles of evolution in relation to Darwin's Finches. Explain convergence, divergence and parallelism.

<u>COURSE OUTCOMES</u>

SEMESTER-I

Core-1

- Students will have a sound knowledge of mathematical physics ((Calculus, Vector Calculus, orthogonal curvilinear co-ordinates, vector differentiation and vector integration) and be able to apply this knowledge to analyze a variety of physical phenomena.
- Students will be capable of oral and written scientific communication and will prove that they can think critically and work independently.

Core-2

- Students will have a thorough knowledge of rotational dynamics, non-inertial systems, elasticity, fluid motion, gravitation and central force motion, special theory of relativity and enable them to apply the above knowledge to analyze a variety of physical phenomena.
- Students will be capable of oral and written scientific communication and will prove that they can think critically and work independently.

PHYSICS LAB C-I

 Students will have a good laboratory skills, enabling them to take observations and measurements in a physics laboratory and analyze the results to draw valid conclusions. • Students will learn the use of operating system Linux or Microsoft windows to solve problems relating to physics.

LAB C-II

• Students will have a thorough laboratory skills, enabling them to take observations and measurements in a physics laboratory and analyze the results to draw valid conclusions.

SEMESTER-II

<u>C-3</u>

- Students will have a sound knowledge of Electric Field and Potential, Magnetic field, Electrical circuits and be able to apply this knowledge to analyze a variety of physical phenomena.
- Students will be capable of written scientific communication and will prove that they can think critically and work independently.

<u>C-4</u>

• Students will have a thorough knowledge about Geometrical optics, wave optics, wave motion, interference, diffraction etc. and be able to apply the above knowledge to analyze various aspects of a physical phenomena.

PHYSICS LAB C-III

 Students will have a good laboratory skills, enabling them to take observations and measurements in a physics laboratory and analyze the results to draw valid conclusions.

PHYSICS LAB C-IV

• Students will develop a good laboratory skills, which help them to take observations and analyze the results to draw conclusions.

SEMESTER-III

<u>C-5</u>

• Students will have a sound knowledge in mathematical physics (
Fourier series, Frobenius method, Special Functions, Some special
Integrals, Partial differential equations) and be able to apply this
knowledge for a proper understanding of physics.

<u>C-6</u>

• Students will have a thorough knowledge of Thermal physics and be able to study of different physical phenomena.

PHYSICS LAB-C-V

 Students will have a good knowledge of computer programming and numerical analysis but to emphasize its role in solving problems in physics.

LAB-C-VI

 Students will have a good laboratory skills which will help them to take observations and measurements in a physics laboratory and to draw valid conclusions.

C-7

 Students will have a sound knowledge of Digital system and applications, and be able to apply this knowledge to analyze a variety of physical phenomena.

LAB-C-VII

 Students will have a thorough laboratory skills enabling them to take observations and measurements in a physics laboratory and to analyze its results.

SEMESTER-IV

<u>C-8</u>

• Students will have proficiency in mathematical physics (Complex analysis, Integral transform, Laplace transform) and the mathematical concepts needed for a proper understanding of physics.

<u>C-9</u>

- Students will have a good knowledge of modern physics, nuclear physics and be able to apply this knowledge to analyze a variety of physical phenomena.
- Students will be capable of oral and written scientific communication and will prove that they can think critically and work independently.

C-10

 Students will have a sound knowledge of analog systems and its applications, which will help them to analyze different physical phenomena.

PHYSICS LAB- C-VIII

• Students will develop computing skills relating to Scilab based simulations experiments based on mathematical physics.

PHYSICS LAB -C-IX

• Students will have a thorough laboratory skills, enabling them to take observations in a laboratory and to draw conclusions.

LAB-C-X

 Students will have a good laboratory skills, enabling them to take observations and measurements in a physics laboratory and analyze the results to draw valid conclusions.

SEMESTER-V

<u>C-11</u>

- Students will have a thorough knowledge of quantum mechanics and its applications, and be able to apply the knowledge to analyze different physical problems.
- It is helpful for students to develop oral and written scientific communication relating to physics.

<u>C-12</u>

 Students will have a sound knowledge of solid state physics and be able to apply this knowledge to analyze a variety of physical phenomena.

C-13

 Students will have a good knowledge of electromagnetic theory and be able to apply this knowledge to analyze different problems relating to physics.

<u>C-14</u>

• Students will have a thorough knowledge of statistical mechanics and be able to apply this knowledge to analyze a variety of physical phenomena.

PHYSICS LAB-C-XI

• Students will have a sound knowledge on C/C++/Scilab for solving various problems based on Quantum mechanics.

LAB-C-XII

 Students will have a good laboratory skills which will help them to take observations and measurements in a physics laboratory and to draw valid conclusions.

LAB-C-XIII

 Students will have a thorough laboratory skills enabling them to take observations and to analyze its results and to draw valid conclusions.

<u>C-15</u>

• Students will have a good knowledge of statistical mechanics and be able to study and analyze a variety of physical phenomena.

<u>DEPARTMENT OF PHYSICS</u> PROGRAMME OUTCOMES

- 1. Students are expected to acquire a core knowledge in physics, including the major premises of mathematical physics, classical mechanics, quantum mechanics, electromagnetic theory, electronics, optics, special theory of relativity and modern physics.
- 2. Students are also expected to develop a written and oral communication skills in communicating physics related topics.
- 3. Students would be able to learn how to design and conduct an experiment (or series of experiments) demonstrating their understanding of the scientific method and processes. They are expected to have an understanding of the analytical methods required to interpret and analyze results and draw conclusions as supported by their data.
- **4.** Students will develop the proficiency in the acquisition of data using a variety of laboratory instruments and in the analysis and interpretation of such data.
- **5.** Students will realize and develop an understanding of the impact of physics and science on society.
- **6.** Students can apply conceptual understanding of the physics to general real-world situations.
- 7. Students will have to describe the methodology of science and the relationship between observation and theory.

- **8.** Students will have to discover the different concepts of physics relating to other disciplines such as mathematics, computer science, engineering and chemistry.
- **9.** Students will have to analyze the various physical problems and develop correct solutions using natural laws.
- **10.** Students can appear different competitive examinations like IAS, IPS, Indian Forest Service, OAS and some defence services taking physics as a major subject and can score good marks in physics.
- 11. After completion of this programme students can join masters' programme in physics or applied physics by qualifying the entrance examinations for these programmes of different universities and technical institutions of India.
